# Contents

Introduction	1
General marking guidance	3
Paper 1	5
Paper 1: Mark scheme	33
Paper 2	65
Paper 2: Mark scheme	93
Paper 3	133
Paper 3: Mark scheme	157

# General marking guidance

---

- All candidates must receive the same treatment. Examiners must mark the last candidate in exactly the same way as they mark the first.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed-out work should be marked UNLESS the candidate has replaced it with an alternative response.
- For all questions marked using a levels based mark scheme, examiners should pay particular attention to the initial rubric which begins the indicative content section. This rubric details the Assessment Objective and where applicable strand emphasis that should be applied when making judgements within each band.

## How to award marks when level descriptions are used

### 1. Finding the right level

The first stage is to decide into which level the answer should be placed in. To do this, use a 'best-fit' approach, deciding which level most closely describes the quality of the answer. Answers can display characteristics from more than one level, and where this happens markers must use the guidance below and their professional judgement to decide which level is most appropriate.

For example, one stronger passage at L4 would not by itself merit a L4 mark, but it might be evidence to support a high L3 mark, unless there are substantial weaknesses in other areas. Similarly, an answer that fits best in L3 but which has some characteristics of L2 might be placed at the bottom of L3. An answer displaying some characteristics of L3 and some of L1 might be placed in L2.

### 2. Finding a mark within a level

After a level has been decided on, the next stage is to decide on the mark within the level. The instructions below tell you how to reward responses within a level. However, where a level has specific guidance about how to place an answer within a level, always follow that guidance.

#### Levels containing 2 marks only

Start with the presumption that the work will be at the top of the level. Move down to the lower mark if the work only just meets the requirements of the level.

### **Levels containing 3 or more marks**

Markers should be prepared to use the full range of marks available in a level and not restrict marks to the middle. Markers should start at the middle of the level (or the upper-middle mark if there is an even number of marks) and then move the mark up or down to find the best mark. To do this, they should take into account how far the answer meets the requirements of the level:

- If it meets the requirements *fully*, markers should be prepared to award full marks within the level. The top mark in the level is used for answers that are as good as can realistically be expected within that level
- If it only *barely* meets the requirements of the level, markers should consider awarding marks at the bottom of the level. The bottom mark in the level is used for answers that are the weakest that can be expected within that level
- The middle marks of the level are used for answers that have a *reasonable* match to the descriptor. This might represent a balance between some characteristics of the level that are fully met and others that are only barely met.

**Paper 1**

Sample assessment material for first teaching  
September 2016  
**Time: 2 hours 15 minutes**

Paper Reference

**9GE0/01**

**You must have:**

Resource Booklet (enclosed)  
Ruler, calculator

Total Marks

--

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section **A**, and Section **C**.  
Answer **either** Question 2 **or** Question 3 in Section **B**.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Calculators may be used.
- Any **calculations** must show all stages of **working out** and a **clear answer**.

## Information

- The total mark for this paper is 105.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

## Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

**PEARSON**

## SECTION A: TECTONIC PROCESSES AND HAZARDS

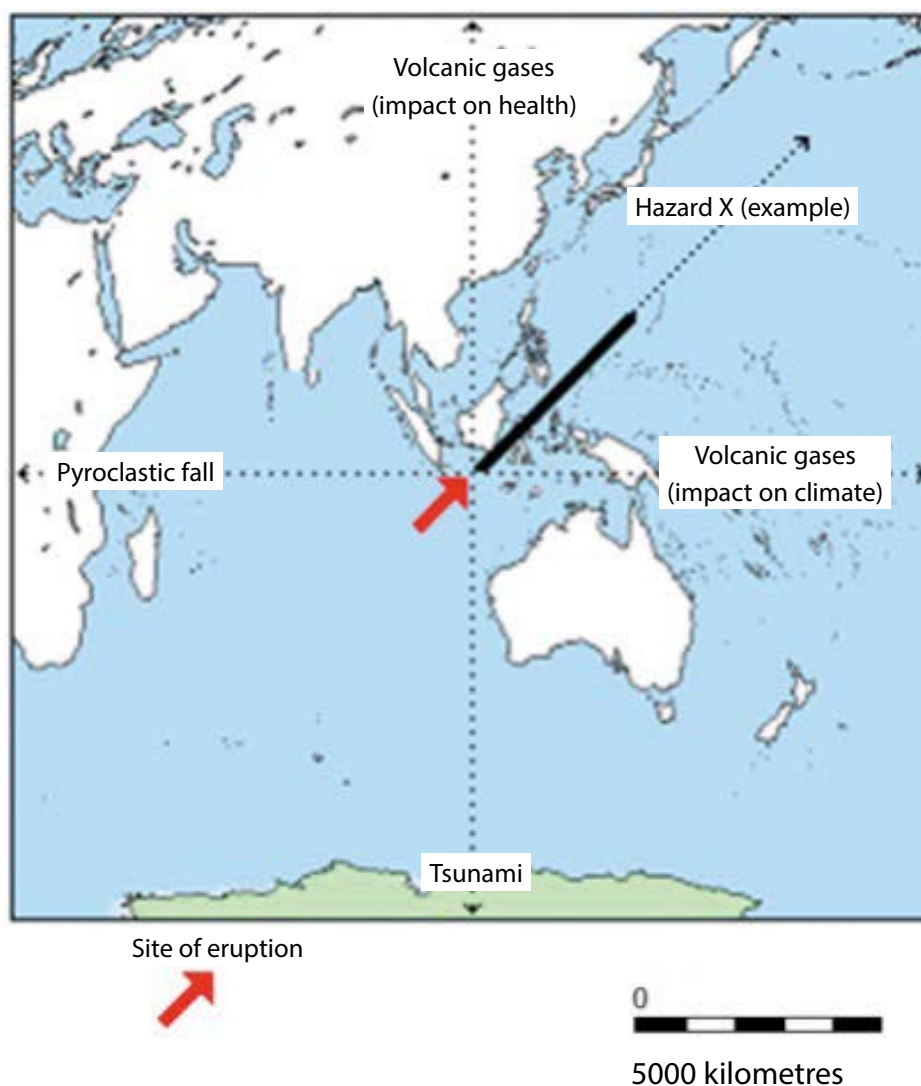

Answer ALL questions in this section. Write your answers in the spaces provided.

You must use the Resource Booklet provided.

- 1 Study Figure 1 in the Resource Booklet.
- (a) For each volcanic hazard shown in Figure 1, draw a line from the site of eruption along the dotted line to show the areal extent of the hazard.

An example is shown for Hazard X.

(4)

**SECTION B: LANDSCAPE SYSTEMS, PROCESSES AND CHANGE**

**Answer ONE question in this section – either Question 2 OR Question 3.**

**Glaciated Landscape and Change**

**If you answer Question 2 put a cross in the box  .**

**You must use the Resource Booklet provided.**

**2** Study Figure 2 shows a lowland glaciated landscape during and after glaciation.

Figure 2 shows a lowland glaciated landscape during and after glaciation.

(a) Study Figure 2A.

Explain how meltwater has contributed to the formation of the proglacial features shown.

## Paper 1 mark scheme

Question number	Answer	Mark
1(a)	<p style="text-align: center;"><b>AO3 (4 marks)</b></p> <p>Award <b>1</b> mark for each line that falls within the acceptable ranges shown below, up to a maximum of <b>4</b> marks.</p> 	<b>(4)</b>

Question number	Indicative content
1(b)	<p style="text-align: center;"><b>AO1 (3 marks)/AO2 (9 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p>Responses that demonstrate <b>only</b> AO1 without any AO2 should be awarded marks as follows:</p> <ul style="list-style-type: none"> <li>• Level 1 AO1 performance: 1 mark</li> <li>• Level 2 AO1 performance: 2 marks</li> <li>• Level 3 AO1 performance: 3 marks.</li> </ul> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• mega-disasters are large-scale disasters on either an areal scale or in terms of their economic and human impact</li> <li>• they pose serious problems for successful management to minimise impact and mitigate the impact of the disaster</li> <li>• they need often require international management both short term and longer term</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• extreme events are likely to pose serious challenges for any governance, however well-planned, e.g. the 2011 Japanese tsunami</li> <li>• extreme events are by their nature unpredictable (1- in a 1000-year events) and so prediction is difficult and prevention is impossible, sometimes secondary and tertiary outcomes occur, e.g. Fukushima</li> <li>• disaster management, pre-, during and after the event, can have a significant impact on losses, e.g. comparison of Japanese tsunami with Indian Ocean, Boxing Day tsunami</li> <li>• strong governance can lead to very effective management of immediate disaster recovery, e.g. Sichuan earthquake in China, as well as the development of longer-term education and community preparation strategies</li> <li>• however, management is expensive and with long return intervals there are strains on budgets that may affect levels of investment, e.g. San Francisco and 'the big one'</li> <li>• democratic governance is also often driven by short-term budgetary constraints which make saving money on management measures very tempting, given that it is expensive</li> <li>• governance is important but it has limitations such as the affordability of prediction and prevention measures, especially in the management of mega-disasters immediately after the event, e.g. Haiti, therefore,</li> </ul>

Question number	Indicative content
	other factors such as level of development are likely to be more important.

Level	Mark	Descriptor
	<b>0</b>	No rewardable material.
<b>Level 1</b>	<b>1-4</b>	<ul style="list-style-type: none"> <li>• Demonstrates isolated elements of geographical knowledge and understanding, some of which may be inaccurate or irrelevant. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas, making limited logical connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce an interpretation with limited relevance and/or support. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make unsupported or generic judgements about the significance of few factors, leading to an argument is unbalanced or lacks coherence. (AO2)</li> </ul>
<b>Level 2</b>	<b>5-8</b>	<ul style="list-style-type: none"> <li>• Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas logically, making some relevant connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce a partial but coherent interpretation that is mostly relevant and supported by evidence. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make judgements about the significance of some factors, to produce an argument that may be unbalanced or partially coherent. (AO2)</li> </ul>
<b>Level 3</b>	<b>9-12</b>	<ul style="list-style-type: none"> <li>• Demonstrates accurate and relevant geographical knowledge and understanding throughout. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas logically, making relevant connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce a full and coherent interpretation that is relevant and supported by evidence. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make supported judgements about the significance of factors throughout the response, leading to a balanced and coherent argument. (AO2)</li> </ul>

Question number	Answer
2(a)	<p style="text-align: center;"><b>AO1 (3 marks)/AO2 (3 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• meltwater creates both erosional features and depositional features</li> <li>• depositional features dominate and tend to produce plains of outwash material, as water slows down and deposits its load</li> <li>• the features are inevitably complex and mixed with glacial features which are frequently modified by meltwater</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• the meltwater from the proglacial lake may spill through the lower ground between ice front and higher ground carving a meltwater channel</li> <li>• the layers of material on the lake floor will be varved deposits as alternate winter and summer melting leads to banded deposits forming on the lake floor – little deposition in winter, much more in summer</li> <li>• The proglacial lake’s shoreline may have kames and terraces where it juxtaposes higher ground</li> <li>• There are signs of a kame delta where the ice front is in contact with the proglacial lake</li> <li>• There are discreet lumps of ice partially buried in the Outwash Plain when these melt they will form kettle holes which become kettle lakes in post-glacial times</li> <li>• The extensive proglacial flat area or outwash; plain is also known as sandur is formed from coarser, sandy deposits carried outwards from the edge of an ice sheet by anastomosing/braided meltwater streams that will have highly variable discharge and capacity</li> </ul>

<b>Level</b>	<b>Mark</b>	<b>Descriptor</b>
	0	No rewardable material.
<b>Level 1</b>	<b>1–2</b>	<ul style="list-style-type: none"> <li>• Demonstrates isolated or generic elements of geographical knowledge and understanding, some of which may be inaccurate or irrelevant. (AO1)</li> <li>• Applies knowledge and understanding to geographical information inconsistently. Connections/relationships between stimulus material and the question may be irrelevant. (AO2)</li> </ul>
<b>Level 2</b>	<b>3–4</b>	<ul style="list-style-type: none"> <li>• Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. (AO1)</li> <li>• Applies knowledge and understanding to geographical information to find some relevant connections/relationships between stimulus material and the question. (AO2)</li> </ul>
<b>Level 3</b>	<b>5–6</b>	<ul style="list-style-type: none"> <li>• Demonstrates accurate and relevant geographical knowledge and understanding throughout. (AO1)</li> <li>• Applies knowledge and understanding to geographical information logically to find fully relevant connections/relationships between stimulus material and the question. (AO2)</li> </ul>

Question number	Answer
2(b)	<p style="text-align: center;"><b>AO1 – (3 marks)/AO2 – (3 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• till fabric analysis reveals details both of ice direction and the provenance of the ice through the presence of erratics</li> <li>• the alignment of drumlins and other sub-glacial features reveals evidence of the speed and direction of ice flow</li> <li>• the position of marginal fluvioglacial (kames) and glacial (lateral moraines) affords evidence of ice thickness via trim lines</li> <li>• micro-features such as chatter marks and rock striations give important evidence of ice direction and speed</li> <li>• distinctions between ablation and lodgement till give evidence of ice speed and direction</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• recessional and terminal moraines in Figure 2B shows the history of ice extent and retreat on this landscape</li> <li>• ground moraine on Figure 2B made up of till is widely distributed wherever ice has been</li> <li>• drumlin 'field' on Figure 2B also made up of till and extent limited by terminal moraine marking limit to impact of moving ice</li> <li>• fluvioglacial landforms, e.g sandur on Figure 2B can give evidence of the direction of meltwater, as the material is horizontally sorted with the largest deposits at the snout.</li> </ul>

<b>Level</b>	<b>Mark</b>	<b>Descriptor</b>
	0	No rewardable material.
<b>Level 1</b>	<b>1–2</b>	<ul style="list-style-type: none"> <li>• Demonstrates isolated or generic elements of geographical knowledge and understanding, some of which may be inaccurate or irrelevant. # Geography

**Advanced**  
**Paper 2**

Sample assessment material for first teaching  
September 2016  
**Time: 2 hours 15 minutes**

Paper Reference

**9GE0/02**

**You must have:**

Ruler, calculator, the Resource Booklet enclosed

Total Marks

--

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A.
- Answer **one** question in Section B and **one** question in Section C.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- Calculators may be used.
- Any **calculations** must show all stages of **working out** and a **clear answer**.

## Information

- The total mark for this paper is 105.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

## Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

## Paper 2 mark scheme

Question number	Answer	Mark
1(a)	<p style="text-align: center;"><b>AO1 (4 marks)</b></p> <p>Award <b>1</b> mark for identifying a reason why globalisation creates cultural erosion, and a further <b>3</b> marks for expansion up to a maximum of <b>4</b> marks.</p> <p>For example:</p> <ul style="list-style-type: none"> <li>• TNCs bring new products and services (1), which often includes largely western cultural ideas (1) which can push out local industries (1) resulting in the gradual disappearance of traditional artefacts/services/languages (1)</li> <li>• Joining global production chains (1) leads to environmental changes/pollution (1) which can result in loss of natural habitats (1) which can diminish traditional practices for hunter/gatherer communities (1).</li> </ul> <p>Accept any other appropriate response.</p>	<b>(4)</b>

Question number	Answer
1(b)	<p style="text-align: center;"><b>AO1 (3 marks)/AO2 9 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p>Responses that demonstrate <b>only</b> AO1 without any AO2 should be awarded marks as follows:</p> <ul style="list-style-type: none"> <li>• Level 1 AO1 performance: 1 mark</li> <li>• Level 2 AO1 performance: 2 marks</li> <li>• Level 3 AO1 performance: 3 marks.</li> </ul> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• TNCs, given that they are trans-national, are at the core of globalisation and profit from the movement towards free trade and lobby for privatisation, deregulation and free trade</li> <li>• they profit from free-market liberalisation and privatisation because it increases their sales and reduces their costs</li> <li>• there are benefits for the owners/shareholders of TNCs</li> <li>• there may be benefits for the workforce and citizens in communities in both developed and developing countries</li> <li>• there will also be costs in both developed and developing countries which may be environmental but also social and economic</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• corporations' are profit driven by definition and seek to cut costs hence the importance of outsourcing which brings jobs but they are often poorly paid</li> </ul>

Question number	Answer
	<ul style="list-style-type: none"> <li>• however, some argue that poorly-paid jobs are simply a stage that all developing countries will pass through and thus may produce more 'winners' in the long run</li> <li>• large energy and mineral extraction corporations have especially poor environmental reputations and, given that they are capitally intensive, they bring very few jobs so perhaps more losers than winners</li> <li>• environmental impacts often are more subtle, but nevertheless can be significant and long term, e.g. loss of biodiversity due to Tar Sand production in Canada and contamination of water supplies bringing greater health risks for local people</li> <li>• the economic benefit of TNCs is dependent on attitudes within host governments to taxation and licence agreements, e.g. Ecuador under Correa, Bolivia under Morales, which can bring positive benefits</li> <li>• economic benefits often shadow environmental concerns leading to contested spaces</li> <li>• economic benefits can also help fund social projects that can improve the quality of lives through improvements in rural health care, education and the protection of indigenous groups</li> <li>• TNCs play a key role in cultural diffusion, which can be seen as a curse by some but a benefit by others – they can bring benefits and increase cultural diversity through glocalisation</li> <li>• given that TNCs can operate only with the approval of countries' governments there are obviously some who benefit – frequently local elites</li> <li>• there are nuanced impacts of TNCs in their 'home' countries – profits are significant and play a key role in wealth creation for pensions and insurance companies which benefit some</li> <li>• however, many jobs are lost, leading to deindustrialisation (e.g. Detroit and the rustbelt) and falling incomes, so a benefit for some but a curse for others</li> <li>• the role of TNCs in the growth of globalisation is central and unequivocal but their impacts are far more contested, with anti-globalisation groups concentrating on the negative elements while the dominant ideology of global institutions sees them as more benign.</li> </ul>

Level	Mark	Descriptor
	0	No rewardable material.
<b>Level 1</b>	<b>1–4</b>	<ul style="list-style-type: none"> <li>• Demonstrates isolated elements of geographical knowledge and understanding, some of which may be inaccurate or irrelevant. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas, making limited logical connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce an interpretation with limited relevance and/or support. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make unsupported or generic judgements about the significance of few factors, leading to an argument is unbalanced or lacks coherence. (AO2)</li> </ul>
<b>Level 2</b>	<b>5–8</b>	<ul style="list-style-type: none"> <li>• Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas logically, making some relevant connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce a partial but coherent interpretation that is mostly relevant and supported by evidence. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make judgements about the significance of some factors, to produce an argument that may be unbalanced or partially coherent. (AO2)</li> </ul>
<b>Level 3</b>	<b>9–12</b>	<ul style="list-style-type: none"> <li>• Demonstrates accurate and relevant geographical knowledge and understanding throughout. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas logically, making relevant connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce a full and coherent interpretation that is relevant and supported by evidence. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make supported judgements about the significance of factors throughout the response, leading to a balanced and coherent argument. (AO2)</li> </ul>

Question number	Answer	Mark
2(a)	<p style="text-align: center;"><b>A01 (4 marks)</b></p> <p>Award <b>1</b> mark for identifying a reason why defence spending is seen as crucial, and a further <b>3</b> marks for expansion up to a maximum of <b>4</b> marks. For example:</p> <ul style="list-style-type: none"> <li>• Defence spending is critical to the exercise of hard power (1) because it enables territorial expansion and/or the protection of current territory (1), which in turn brings wealth through acquisition of resources (1), allowing the maintenance/growth of the economy needed to develop superpower status (1).</li> </ul> <p>Accept any other appropriate response.</p>	<b>(4)</b>

Question number	Answer
2(b)	<p style="text-align: center;"><b>AO1 (3 marks)/AO2 (9 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p>Responses that demonstrate <b>only</b> AO1 without any AO2 should be awarded marks as follows:</p> <ul style="list-style-type: none"> <li>• Level 1 AO1 performance: 1 mark</li> <li>• Level 2 AO1 performance: 2 marks</li> <li>• Level 3 AO1 performance: 3 marks.</li> </ul> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• there is a variety of political and environmental challenges, which exist both domestically and internationally, – direct political challenges to military power over key resources (especially oil), challenges to independence of political action (Russia versus Ukraine), challenges of the environmental impact of exploiting a contested resource base</li> <li>• physical resources include land and water as well as minerals and energy</li> <li>• no superpower is self-sufficient in physical resources but they vary in their dependency on imports to maintain their economies</li> <li>• environmental and political challenges exist both domestically and internationally</li> </ul> <p><b>AO2</b></p> <ul style="list-style-type: none"> <li>• the governments and political elites of the superpowers need to legitimate power by maintaining economic growth or they face internal political challenges to the ruling elite/government that may lead to change</li> <li>• the maintenance of economic growth will inevitably lead to environmental change, much of it negative through increased consumption in itself (the growth of car ownership in China) but also the extraction of the necessary resources to manufacture those resources</li> <li>• there are clearly short-term environmental challenges (pollution of waterways in east and south Asia) but also potentially more serious long-term consequences through habitat destruction and the production of greenhouse gases</li> <li>• there is a clear relationship between environmental concerns and the health of the economy, which can have political repercussions – in times of boom then environmental concerns have a high public profile but in times of economic recession/depression the environment is rarely central to the political debate</li> <li>• superpowers have been active in searching out global resources using TNCs as an instrument of extending their control (US oil companies in Ecuador, Alcoa in Jamaica, Africa’s new imperialist era) but this is politically sensitive as agreements are sought with foreign</li> </ul>

Question number	Answer
	<p>governments who may lack the support of many of their own people (e.g. Nigeria)</p> <ul style="list-style-type: none"> <li>• superpowers use both soft and hard power to establish control of resources (US in Iraq, China in Angola) and this results in political challenges and tensions between superpowers</li> <li>• the agencies of controlling the supply of physical resources are largely TNCs, who have complex relationships with the governments and people of both the superpowers and resource rich countries</li> <li>• exploitation of physical resources on the domestic territory of superpowers will also impact negatively on the environment and thus political legitimacy domestically especially in areas affected – fracking, oil shale exploitation and deep-water oil drilling are obvious examples</li> <li>• there are significant political challenges to the growth model that dominates in all superpowers (rise of green politics) with the challenges, especially the environmental impacts perceived as being both inevitable but also ultimately overwhelming</li> </ul>

<b>Level</b>	<b>Mark</b>	<b>Descriptor</b>
	0	No rewardable material.
<b>Level 1</b>	<b>1–4</b>	<ul style="list-style-type: none"> <li>• Demonstrates isolated elements of geographical knowledge and understanding, some of which may be inaccurate or irrelevant. (AO1)</li> <li>• Applies knowledge and understanding of geographical information/ideas, making limited logical connections/relationships. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to produce an interpretation with limited relevance and/or support. (AO2)</li> <li>• Applies knowledge and understanding of geographical information/ideas to make unsupported or generic judgements about the significance of few factors, leading to an argument is unbalanced or lacks coherence. (AO2)</li> </ul>
<b>Level 2</b>	<b>5–8</b>	<ul style="list-style-type: none"> <li>• Demonstrates geographical knowledge and understanding, which is mostly relevant and may include some inaccuracies. Sample assessment material for first teaching  
September 2016

**Time: 2 hours 15 minutes**

Paper Reference

**9GE0/03**

**You must have:**

a ruler, the Resource Booklet provided, calculator

Total Marks

--

## Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- Calculators may be used.
- Any **calculations** must show all stages of **working out** and a **clear answer**.

## Information

- The total mark for this paper is 70.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

## Advice

- Read each question carefully before you start to answer it.
- You are **advised** to spend the first **15 minutes** reading the Resource Booklet.
- Check your answers if you have time at the end.
- Try to answer every question.

- 2 (a) The table below shows data on income per capita and tropical rainforest forest cover loss for 10 countries.

The formula for Spearman's rank correlation coefficient value R is given below.

$$R = 1 - \frac{6\sum d^2}{n^3 - n}$$

Complete the table below and calculate the value of R for the data given.

Show your working.

(4)

Country	Income per capita (2014 US\$)	Rank	% forest cover loss 1990–2005	Rank	d	d <sup>2</sup>
Brunei	36,600	1	11.2	7		
Costa Rica	10,000	4	29.4	3	1	1
Indonesia	3,500	6	30.8	2		
Kenya	1,400	8	5.1	9	1	1

## Resource exploitation in the Congo Basin of west central Africa

### Section A: The region and its forests

The **Republic of Congo** (referred to here as Congo), **Angola** and the **Democratic Republic of Congo** (referred to as the DRC) are three countries in Africa within the Congo Basin (Figure 1). All were colonies in the past.

- **Angola** gained independence from Portugal in 1975 after a long war of liberation; civil war plagued Angola until 2002.
- The **DRC** was a Belgian colony until gaining independence in 1960, and was called Zaire between 1971 and 1997.
- The **Congo** was a French colony until independence in 1960.

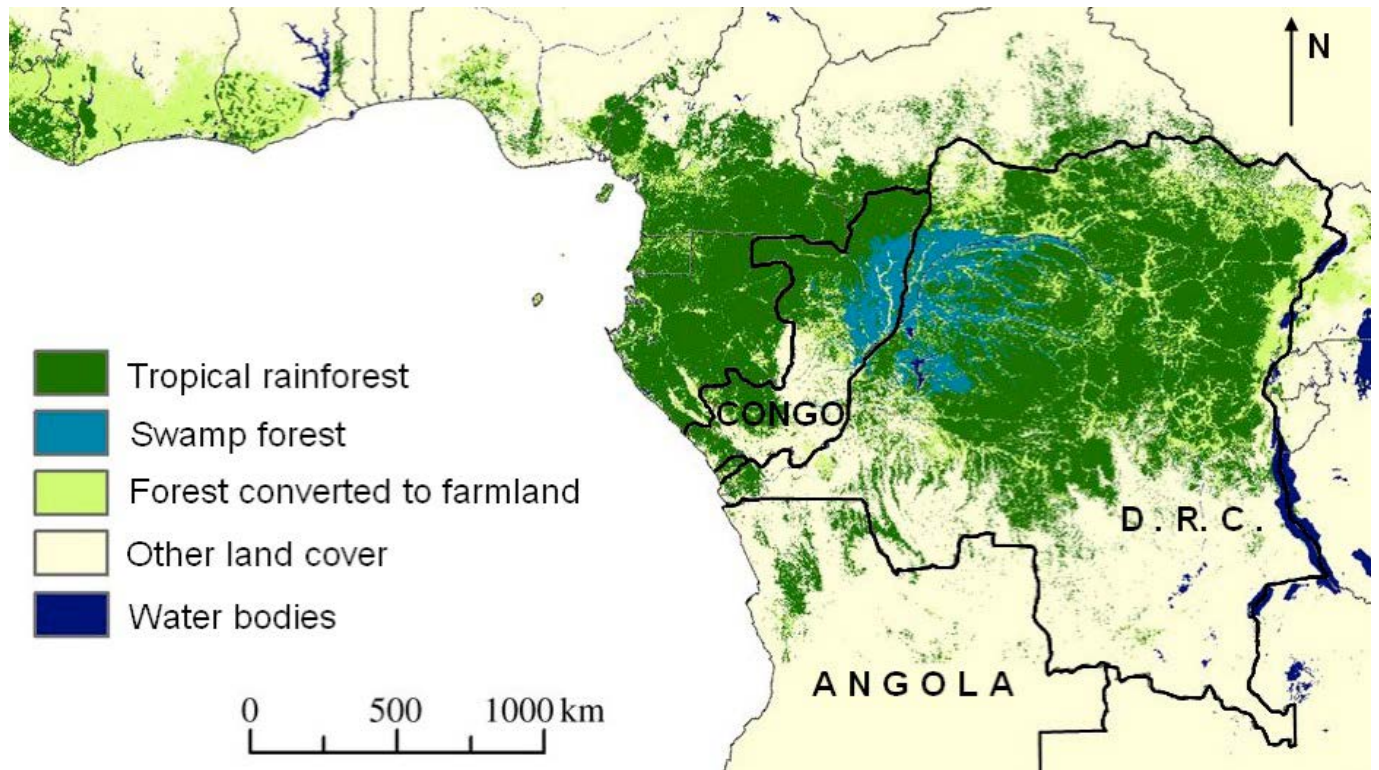

**Congo** and the **DRC** have capital cities (Brazzaville and Kinshasa respectively) on opposite banks of the Congo River.

**Figure 1: A map of the three countries and wider region**

Africa's tropical rainforests are concentrated in the area of the Congo Basin (Figure 2). Rainforests cover only 13% of Africa, but store 90% of all carbon stored in terrestrial ecosystems in Africa.

- The Congo Basin rainforests are the second largest in the world after the Amazon rainforest.
- Africa's rainforests support 60 million people directly, in terms of food supply, fuel wood, timber for construction and other products, medicine and fibres.
- By global standards, deforestation rates in the Congo Basin are low, and falling.
- Access to forests is difficult, due to poor road networks, and mining is seen as more profitable than tropical timber.

(Source: State and evolution of the African rainforests between 1990 and 2010, Published 22 July 2013 from <http://rstb.royalsocietypublishing.org/content/368/1625/20120300.figures-only>)

**Figure 2: A map of forest cover in central Africa**

## SECTION B

### Development, economic and trade data

The DRC and Angola are classified as Least Developed Countries (LDCs) by the United Nations, and are two of 34 LDCs in Africa.

- 70%+ of people in the DRC live on less than US\$1.25 per day (40% in Angola and 30% in Congo).
- Only two countries in Africa (Botswana and Cape Verde) have managed to 'escape' the classification, since the LDC country classification was introduced in 1971.
- While these countries are poor by global standards, they are rich in terms of natural resources.
- The mineral resources of the DRC have been estimated to be worth US\$24 trillion and both Congo and Angola have \$ billions of crude oil still to exploit.

Country	Income per person (US\$)	Population aged 0-14 (%)	Population with electricity (%)	Infant mortality rate (per 1000 live births)	Life expectancy	Average annual GDP growth (%) 2003-2013	Gini co-efficient (income equality)
Angola	5170	48	35	102	52	10.3	58.6
Congo	2590	43	37	36	58	4.5	47.3
DRC	430	45	15	86	49.5	6.2	44.4

**Figure 3: A table showing selected development indicators for the three countries, 2013-14**

## SECTION C

### Economic and trade data

This region of Africa produces resources that are important globally.

- In 2014 Angola was the world's 16th largest producer of **crude oil** and Congo the 39th.
- The DRC is the world's largest producer of **cobalt ores**.
- The DRC is the world's 8th largest producer of **copper ore**.
- The mineral **coltan** (or columbite-tantalite) is produced in the DRC and nearby Rwanda; the DRC is the world's 3rd largest source of coltan.

These metals are found in a wide variety of consumers products (Figure 4).

(Source:Image 19049807 – Sergeii Kolesnyk/123RF \ Image 19671147 – bloomua/123RF \ Image 14270106 - martm/123RF)

**Figure 4: Detail of three resources from Africa used in consumer electronics**

The region is connected to the wider global economy by its rich natural resources, which are exported globally (Figure 5).

- Raw materials make up a significant percentage of total exports.
- The largest import and export partners for the three countries are shown in Figure 6 and their main imports are shown in Figure 7.
- The price of mineral exports from the region is determined by global markets, on the basis of supply and demand.

Like all commodities, mineral prices vary from day to day and year to year. Figure 8 shows changes in crude oil, cobalt and copper prices between 2003 and 2013.

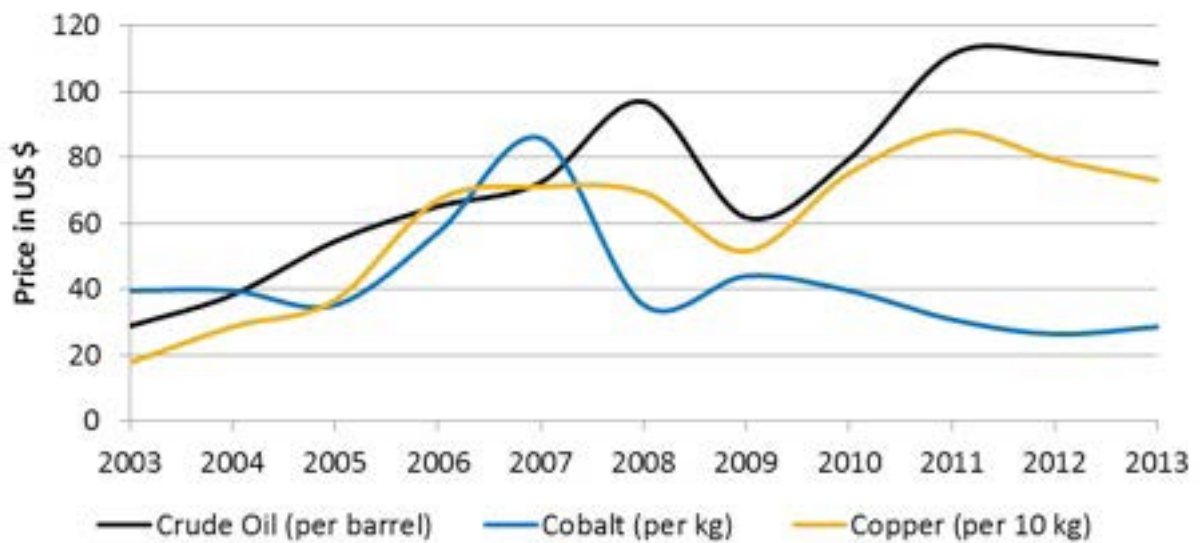

**Figure 5: A graph showing major exports for the three countries in 2012 (for exports over 2% of total exports)**

Imports from: (US\$ billions)	Country	Exports to: (US\$ billions)
South Africa \$1.6 🇿🇦 China \$ 0.8 🇨🇳 Belgium \$ 0.4 🇧🇪	<b>DRC</b>	China \$ 3.3 🇨🇳 South Korea \$0.2 🇰🇷 Finland \$0.2 🇫🇮
France \$ 0.7 🇫🇷 China \$ 0.5 🇨🇳 Brazil \$ 0.3 🇧🇷	<b>Congo</b>	China \$ 3.9 🇨🇳 France \$ 0.9 🇫🇷 Australia \$ 0.7 🇦🇺
China \$3.9 🇨🇳 Portugal \$ 3.8 🇵🇹 South Africa \$ 1.6 🇿🇦	<b>Angola</b>	China \$ 28.7 🇨🇳 India \$6.9 🇮🇳 South Africa \$2.8 🇿🇦

**Figure 6: A table showing the three largest import sources and export destinations for the three countries in 2012**

**Figure 7: A graph showing major imports for the three countries in 2012 (for imports over 2% of total imports)**

**Figure 8: A graph showing crude oil, cobalt and copper prices 2003-2013**

**Figure 9: A scattergraph of natural resources exports versus income per person (2013)**

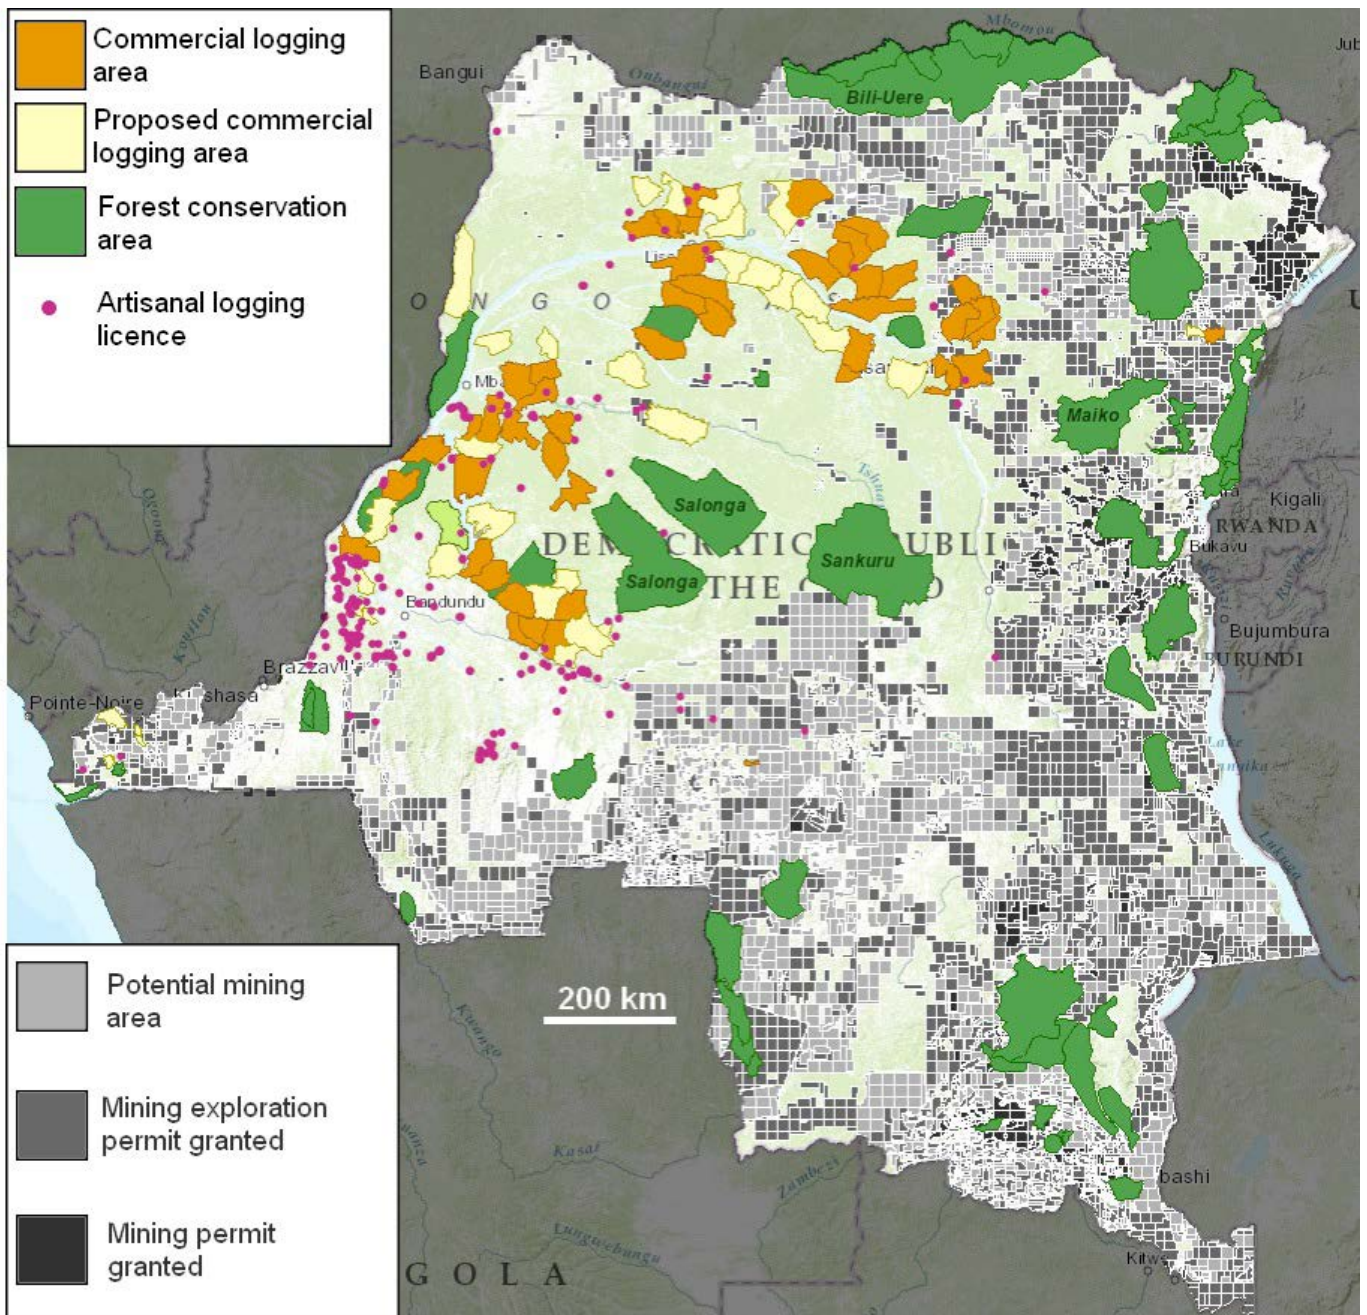

## SECTION D

Although abundant natural resources might be considered a blessing for a country, the concept of the 'Resource Curse' is that abundant natural resources sometimes prevent economic development rather than promote it.

- Resource-rich countries may rely on exporting raw materials, often cheaply, preventing the development of manufacturing and service industries.
- Investment, whether local or foreign, may focus on exploiting resources rather than invested in other sectors such as manufacturing or services.

Some natural resources in the region are, or have been, examples of **conflict minerals**.

- Minerals extracted in a conflict/war zone with the profits used to fund the conflict.
- Control of mines and mining areas is a key goal within the conflict.
- Even today, many mining areas are controlled by military groups in eastern DRC as part of the ongoing Kivu Conflict between the government of the DRC and rebel Rwandan Hutu forces.
- In Angola both oil and diamonds played a key part in funding the civil war between 1975 and 2002.

(Source: Taken from: <http://www.wri.org/applications/maps/forestatlas/cod/index.htm#v=atlas&l=fr>)

**Figure 10: A map showing logging, mining and forest conservation areas in the DRC**

### Artisanal mining

- Up to 12 million independent miners work in the **DRC**, 20–30% of whom may be children.
- Coltan and cobalt are mined on a small scale with basic hand tools in open pits.
- Successful miners can earn US\$50 per week, more than can be earned from either farming or timber cutting.
- A complex chain of trade moves ores to warehouses many of which are Chinese owned.
- The minerals are used by global electronics TNCs.

(Source: <http://www.fairphone.com/2014/10/02/research-trip-visiting-tin-tantalum-and-tungsten-mines/>)

**Artisanal mining in the DRC**

### TNC mining and oil drilling

- French and Italian TNCs Total and Eni extract 70% of oil production in **Congo**.
- In **Angola** the government oil and gas company Sonangol has joint-venture operations with TNCs Total, Chevron, ExxonMobil, BP, Statoil, and Eni.
- Chinese companies Sinopec and the China National Offshore Oil Corporation are increasingly active.
- In the **DRC** mining companies from Australia, the UK, USA and Canada extract copper and other minerals.

(Source: © Christopher Poe)

**Offshore oil rig, Angola**

**Figure 11: Photos of Artisanal miners and TNCs**

<p><b>View 1: Angolan oil</b></p> <p>Next to the sleek skyscrapers and luxury apartments (<i>in Luanda</i>), ramshackle shantytowns and crowded slums spread for miles in every direction, housing millions of people living on less than \$2 a day. In many cases, even basic necessities like water and electricity are lacking.</p> <p><b>(CNN report on Angola, 2012)</b></p>	<p><b>View 2: Coltan mining in the DRC</b></p> <p>Illegal mining exploits child labour as well as destroying the habitats of many species such as chimpanzees and gorillas that are already in grave danger due to poaching and deforestation.</p> <p><b>(The Jane Goodall Institute, 2014)</b></p>
<p><b>View 3: China in Africa</b></p> <p>It is rather difficult to answer whether Chinese-African relationship is a win-win or one-sided deal. There is no doubt that Chinese cooperation with Africa is a well-thought-out, wise and strategic decision of the Chinese government and Chinese market players. But what is in it for Africa in the long run?</p> <p><b>(Economics Student Society of Australia, 2013)</b></p>	<p><b>View 4: African economic growth</b></p> <p>Economic growth in Sub-Saharan Africa continues to rise from 4.7% in 2013 to a forecasted 5.2% in 2014. This performance is boosted by rising investment in natural resources and infrastructure, and strong household spending. Growth was notably buoyant in resource-rich countries.</p> <p><b>(World Bank, 2014)</b></p>

**Figure 12: A table showing some views about resource exploitation in the region**

## Paper 3 mark scheme

Question number	Indicative content	Mark
<b>1</b>	<p style="text-align: center;"><b>AO1 (4 marks)</b></p> <p>Award <b>1</b> mark for identifying a reason why tropical rainforests are a globally important physical system, and a further <b>3</b> marks for expansion up to a maximum of <b>4</b> marks. For example:</p> <ul style="list-style-type: none"> <li>• Key role in carbon sequestration (1) because, during photosynthesis, carbon from the atmosphere is converted into biomass (a carbon store) (1) which, in addition, means forests play a key role in climate regulation by balancing global CO<sub>2</sub> levels (1) and the 'lungs of the Earth' idea in terms of oxygen generation (1).</li> <li>• Key role in the water cycle (1), in terms of infiltration/interception and storing water rather than promoting surface runoff and flooding (1) copious evaporation/transpiration aids the production of clouds and maintains the equatorial climate (1) and the rainfall associated with the ITCZ climate belt (1).</li> </ul> <p>Reject arguments based on mineral wealth/other resources that involve the destruction of the forest.</p> <p><b>Accept any other appropriate response.</b></p>	<b>(4)</b>

Question number	Indicative content	Mark								
<b>2 (a)</b>	<p style="text-align: center;"><b>AO3 (4 marks)</b></p> <p>Award 1 mark for completion of empty d and d<sup>2</sup> rows:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td style="text-align: center;">6</td> <td style="text-align: center;">36</td> </tr> <tr> <td style="text-align: center;">4</td> <td style="text-align: center;">16</td> </tr> <tr> <td style="text-align: center;">0</td> <td style="text-align: center;">0</td> </tr> <tr> <td style="text-align: center;">4</td> <td style="text-align: center;">16</td> </tr> </tbody> </table> <p>Award 1 mark for the sum of d<sup>2</sup> column (<math>\Sigma</math>) = 80</p> <p>Award 1 mark for the correct working of equation:</p> $1 - \frac{6 \times 80}{10^3 - 10} \text{ or } 1 - \frac{480}{990} = R$ <p>Award 1 mark for answers that round to R = 0.52 OR Award full marks for the correct value of R alone. Allow error carried forward from each step.</p>	6	36	4	16	0	0	4	16	<b>(4)</b>
6	36									
4	16									
0	0									
4	16									

Question number	Indicative content	Mark
2(b)	<p style="text-align: center;"><b>AO3 (4 marks)</b></p> <p>For each reason, award <b>1</b> mark for identifying a reason why the value for R which has been calculated may be unreliable, and a further mark for an appropriate expansion. For example:</p> <ul style="list-style-type: none"> <li>• The two sets of data are from different dates (1990–2005 versus 2014) (1), which means any relationship may be spurious/is questionable because the time periods do not correlate (1) because forest cover loss encompasses a 15-year period whereas income per capita is a snapshot of 2014 (1) and since 2004 rates of forests loss in some countries could have changed significantly either up or down (1).</li> <li>• The calculation is based on only 10 pairs of data (1) which is too small to be meaningful (1), especially as not all tropical forest countries are included (1) so the data is at best partial (1).</li> <li>• Forest loss data is likely to be a best guess in many cases (1), especially in LDCs with limited funds to monitor changes (1), and may be based on extrapolation from satellite data (1), which reduces its accuracy (1).</li> </ul> <p>Do not credit statements such as 'I may have incorrectly calculated the equation' or similar.</p> <p><b>Accept any other appropriate response.</b></p>	(4)

Question number	Indicative content
3	<p style="text-align: center;"><b>AO1 (4 marks)/AO3 (4 marks)</b></p> <p><b>Marking instructions</b> Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b> The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• development can be assessed using a range of measures, both human and economic but there can be issues of reliability with both single measures and indices to measure development</li> <li>• indices such as Gini Coefficient which is the most commonly used measure of a nations inequality may be used as they show more detail than single measures</li> <li>• economic development such as a higher income per person, can lead to further developments such as access to electricity</li> <li>• youthful populations are likely to have high birth rates and low economic development</li> </ul> <p><b>AO3</b></p> <ul style="list-style-type: none"> <li>• Angola’s economy is growing much faster than the DRC/Congo; answers might argue this does not indicate level of development, only progress from a human development perspective, Angola looks weaker than Congo; it has a very high infant mortality rate (suggesting poor healthcare/access) and a low life expectancy – Congo is a full six years’ more</li> <li>• credit the idea that, from Figure 5, Angola is almost wholly reliant on oil exports, which might suggest a very ‘simple’ economy</li> <li>• answers might refer to the Gini Co-efficient, which is very high for Angola, suggesting a very unequal society – perhaps meaning the per capita income data is of little value</li> <li>• a case can be made for Congo being the most developed; its per capita income is in the middle and the % living on less than \$1.25 per day is the lowest of the three countries; income distribution is better than Angola and life expectancy, access to electricity and infant mortality are the best; its 43% population 0–14 might suggest it is transitioning towards a higher development level</li> </ul> <p><b>Accept any other appropriate response.</b></p>

Question number	Indicative content
6	<p style="text-align: center;"><b>AO1 (4 marks)/AO2 (12 marks)/AO3 (8 marks)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the levels-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive and candidates are not required to include all of it. Other relevant material not suggested below must also be credited. Relevant points may include:</p> <p>There is no 'correct' answer here, although answers that argue 'more curse than blessing' are likely to be the most common; answers should present both sides and use evidence from the Resource Booklet to support their assertions.</p> <p><b>AO1</b></p> <ul style="list-style-type: none"> <li>• mining and other extraction industries support direct jobs as well as further employment opportunities through the multiplier effect and cumulative causation</li> <li>• jobs are low paid and exploitative, with poor/dangerous working conditions</li> <li>• some jobs are well paid and will lead to increases in income inequalities</li> <li>• there is a range of environmental issues linked to mining (water pollution, deforestation)</li> </ul> <p><b>AO2</b></p> <p>Possible argument for 'curse':</p> <ul style="list-style-type: none"> <li>• Colonial powers, who controlled the three countries' resources in the first half of the 20th century, are likely to have actively suppressed education for the poor/landless because an educated population might have threatened their control</li> <li>• There doesn't appear to be a strong relationship between proportion of GDP generated from exporting natural resources and the GDP per person, which suggests that being naturally rich in resources is not equivalent to a high standard of living</li> <li>• Many jobs in the oil industry might not go to local people but instead immigrants from the West/China therefore the money made from oil does not trickle down to local people</li> <li>• TNC profits from resource extraction are likely to be repatriated which leaves little for the three countries' governments in tax revenue that could support state welfare, which impacts the poorest disproportionately</li> <li>• There is often a link between conflict and mineral resources, with mining areas controlled by military groups in the DRC, or the oil and diamond industries being used to fund the Angolan civil war, which may disproportionately impact on the poorest people</li> <li>• Environmental costs are seldom included in any analysis so any short term economic gains are offset by longer-term environmental damage, for example the deforestation in the DRC. The need for conservation strategies has increased</li> <li>• An important cost to the environment is the destruction of habitats and pollution of local water bodies which not only reduces biodiversity but can also increase issues of water insecurity for local people. This could lead</li> </ul>

Question number	Indicative content
	<p>to local conflict or even international conflict over the trans-boundary Congo River</p> <ul style="list-style-type: none"> <li>• All three countries are heavily reliant on China (both for imports and exports) making them dependent on China's status as a global economic power. This makes them vulnerable to any economic slowdown where China's buying power is reduced, reducing the three countries' revenue, and/or China's exports reduce, potentially derailing the three countries' economic development.</li> </ul> <p>Possible arguments for 'blessing':</p> <ul style="list-style-type: none"> <li>• There are direct and indirect jobs created in industries that have higher levels of pay than the subsistence agriculture that was likely to have been present in these countries before these resources were exploited</li> <li>• Access through tropical rainforest, swamps and water bodies to obtain the rich natural resources (particularly in Congo and the DRC) requires infrastructure that can act as a catalyst for development</li> <li>• Industrial development produces increased tax revenues (however small) that the governments of all three countries could use to improve infrastructure and services. Improved access to electricity (which is as low as 15% in the DRC) and healthcare to reduce infant mortality (which is as high as 102/1000 in Angola) would improve the chance that people living in these countries live beyond their 50s.</li> <li>• The situation may improve over time (Rostow model or Kuznet's curve) as it did in what are now developed countries. What could seem a curse, at this point in time for these countries, could be seen as the short-term drawbacks of a greater long-term benefit.</li> <li>• It may be that the resources are themselves a blessing, but it is their management that turns them into a curse. The rich resources would have played a large part in attracting the colonial powers to the countries in the first place. In the present day, all three countries still have important trade connections with their colonisers, and France still imports \$0.9 billion of goods from the Congo. However these countries, particularly the DRC, have a history of poor governance post-independence with proceeds from the resource 'blessing' channelled into hands of a small elite; Over 70% of people in the DRC live on less than US\$1.25 per day.</li> <li>• Resources may be more of a blessing if they are diversified. Countries, such as DRC, with a diversity of resource exports will be less sensitive to commodity price fluctuations than countries which rely on few resource exports, such as Congo and Angola, and therefore will gain a comparable advantage at these times.</li> <li>• Sometimes resources are more of a blessing than at other times, for example due to price fluctuations or the rise of new technologies such as smartphones and tablets. The production of lithium batteries in mobile phones and tablets relies on cobalt, which has had a stable price of US\$35 to US\$45. However, between 2005 and 2008 prices peaked at US\$85, which would have been a short-term blessing for the DRC as the world's largest producer. Crude oil on the other hand, which Angola is reliant on, has fluctuated more with lows of US\$20 to highs of US\$115. Over time this can be considered more of a blessing for Angola because</li> </ul>

Question number	Indicative content
	<p>prices have trended upwards.</p> <p><b>A03</b></p> <ul style="list-style-type: none"> <li>• <b>Introduction to Section A:</b> all three countries were previously colonies, with the DRC and Congo gaining independence in 1960, and Angola experiencing a lengthy war to gain independence in 1975 and then experiencing civil war for almost 30 years until 2002, which indicates that there has been an unsettled political climate in the region</li> <li>• <b>Figure 9:</b> the countries with the highest GDP per capita have smaller proportions of their GDP coming from fossil fuels, mineral and ore exports - for example, Argentina has a GDP per capita of approximately \$14,500 and about 9% GDP from exports, whereas Angola has approximately half the GDP per capita and 97% GDP from exports.</li> <li>• <b>Figure 12</b> includes opinion and views of external interest of groups such as American media and conservation charities, so their agendas should be taken into account</li> <li>• <b>Figure 12:</b> view 4 argues that resource rich countries benefit in terms of economic growth</li> <li>• <b>Figure 11</b> shows two extremes of resource development but there are likely to be a continuum of approaches that have varied impacts</li> <li>• <b>Figure 3, Figure 12</b> show that inequality is high in all countries; this might suggest the poorest simply never see any resource wealth (no trickle down);</li> <li>• <b>Figure 12:</b> issues of corruption are mentioned. View 1 makes this point. Poverty, child labour, exploitation are all serious issues;</li> <li>• <b>Figure 11</b> suggests mining is arduous and likely to be dangerous</li> <li>• <b>Figure 10 and 11:</b> resources show that deforestation is slow compared to other areas, but this may not last as significant areas of DRC have been licensed for artisanal and commercial logging ensuring future degradation</li> <li>• <b>Figure 11:</b> there are possible issues with soil erosion from mining and possibly oil spills off the coast of Angola/Congo</li> <li>• <b>Figure 10:</b> future deforestation and widespread degradation could result if localised mineral exploration in DRC turns into widespread exploitation</li> <li>• <b>Figure 10:</b> some large areas of DRC are protected</li> </ul>
