# AS PHYSICS

Paper 2

Friday 18 May 2018 Morning Time allowed: 1 hour 30 minutes

#### **Materials**

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae booklet.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 70.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

# For use in exams from the June 2016 Series onwards

# DATA - FUNDAMENTAL CONSTANTS AND VALUES

Quantity	Symbol	Value	Units
speed of light in vacuo	С	$3.00\times10^{8}$	m s <sup>-1</sup>
permeability of free space	$\mu_0$	$4\pi\times10^{-7}$	H m <sup>-1</sup>
permittivity of free space	$\mathcal{E}_0$	$8.85 \times 10^{-12}$	F m <sup>-1</sup>
magnitude of the charge of electron	e	$1.60\times10^{-19}$	С
the Planck constant	h	$6.63\times10^{-34}$	J s
gravitational constant	G	$6.67\times10^{-11}$	${\rm N}~{\rm m}^2~{\rm kg}^{-2}$
the Avogadro constant	$N_{\mathrm{A}}$	$6.02\times10^{23}$	$\mathrm{mol}^{-1}$
molar gas constant	R	8.31	$\rm J~K^{-1}~mol^{-1}$
the Boltzmann constant	k	$1.38\times10^{-23}$	J K <sup>-1</sup>
the Stefan constant	$\sigma$	$5.67\times10^{-8}$	${ m W} { m m}^{-2} { m K}^{-4}$
the Wien constant	$\alpha$	$2.90\times10^{-3}$	m K
electron rest mass (equivalent to $5.5 \times 10^{-4} \text{ u}$ )	$m_{ m e}$	$9.11 \times 10^{-31}$	kg
electron charge/mass ratio	$rac{e}{m_{ m e}}$	$1.76\times10^{11}$	$\rm C~kg^{-1}$
proton rest mass (equivalent to 1.00728 u)	$m_{ m p}$	$1.67(3) \times 10^{-27}$	kg
proton charge/mass ratio	$rac{e}{m_{ m p}}$	$9.58\times10^7$	$ m C~kg^{-1}$
neutron rest mass (equivalent to 1.00867 u)	$m_{ m n}$	$1.67(5) \times 10^{-27}$	kg
gravitational field strength	g	9.81	${ m N~kg^{-1}}$
acceleration due to gravity	g	9.81	$\mathrm{m}\;\mathrm{s}^{-2}$
atomic mass unit (1u is equivalent to 931.5 MeV)	u	$1.661 \times 10^{-27}$	kg

#### **ALGEBRAIC EQUATION**

quadratic equation  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ 

#### **ASTRONOMICAL DATA**

Body	Mass/kg	Mean radius/m
Sun	$1.99 \times 10^{30}$	$6.96 \times 10^{8}$
Earth	$5.97 \times 10^{24}$	$6.37 \times 10^6$

### **GEOMETRICAL EQUATIONS**

arc length	$= r\theta$
circumference of circle	$=2\pi r$
area of circle	$=\pi r^2$
curved surface area of cylinder	$=2\pi rh$
area of sphere	$=4\pi r^2$
volume of sphere	$=\frac{4}{3}\pi r^3$

$$P = VI = I^2R = \frac{V^2}{R}$$

$$\varepsilon = \frac{E}{Q} \qquad \qquad \varepsilon = I(R + r)$$

Version 1.4

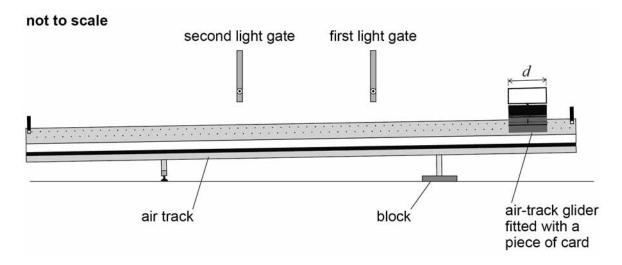

#### **Section A**

Answer all questions in this section.

0 1

**Figure 1** shows the apparatus used by a student in an experiment to measure the acceleration due to gravity, g.

Figure 1

In the experiment:

- a block is used to raise one end of the air track as shown in Figure 1
- an air-track glider is released from rest near the raised end of the air track and passes through the first light gate and then through the second light gate
- a piece of card of length *d* fitted to the air-track glider interrupts a light beam as the air-track glider passes through each light gate
- a data logger records the time taken by the piece of card to pass through each light gate and also the time for the piece of card to travel from one light gate to the other.

0 1 Table 1 gives measurements made with the light gates as shown in Figure 1.

#### Table 1

Time to pass through first light gate / s	Time to pass through second light gate / s	Time to travel from first to second light gate / s
0.50	0.40	1.19

The length d of the piece of card is  $10.0~\mathrm{cm}$ 

Assume there is negligible change in velocity while the air-track glider passes through a light gate.

Determine the acceleration a of the air-track glider.

[3 marks]

 $m\ s^{-2}$ 

Question 1 continues on the next page

0 1 . 2

Two further sets of readings,  $\bf A$  and  $\bf B$ , are taken each with the light gates in different positions along the air track.

Assume the acceleration is the same in each set.

Table 2 shows these additional sets of results.

Table 2

Set	Time to pass through first light gate / s	Time to pass through second light gate / s	Time to travel from first to second light gate / s
Α	0.61	0.42	1.77
В	0.55	0.37	2.11

Explain how the data in **Table 2** show that the distance between the light gates in set **B** is greater than in set **A**.

Assume there is negligible change in velocity while the air-track glider passes through a light gate.

[2 marks]

-		

Question 1 continues on the next page DO NOT WRITE ON THIS PAGE ANSWER IN THE SPACES PROVIDED

Turn over ▶

Do not write outside the box

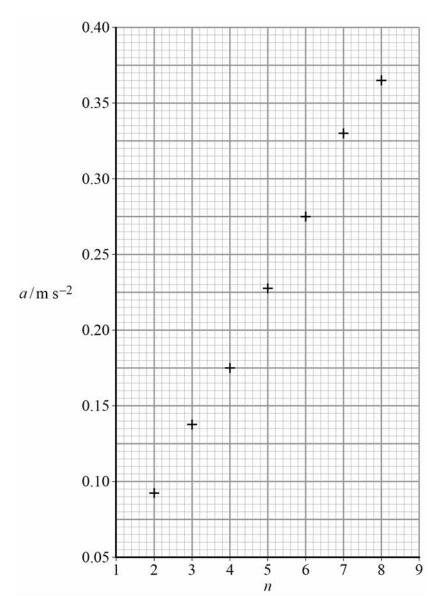

0 1 . 3

Additional values for the acceleration of the air-track glider are obtained by further raising the end of the air track by using a stack consisting of identical blocks. Adding each block to the stack raises the end of the air track by the same distance.

**Figure 2** is a graph of these results showing how a varies with n, the number of blocks in the stack.

Figure 2

Draw a suitable best-fit straight line on **Figure 2** and determine G, the gradient of your line.

[2 marks]

G = \_\_\_\_

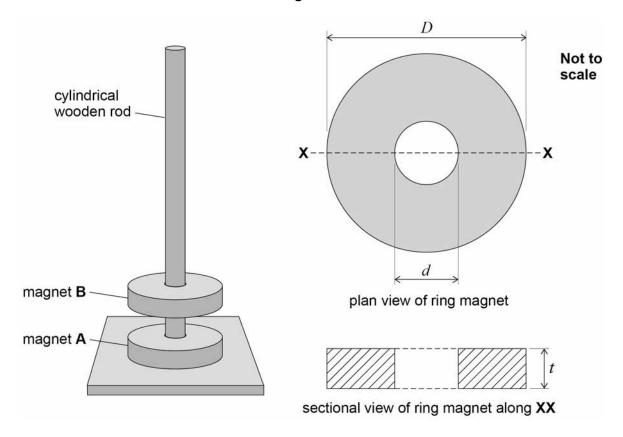

0 1.4	It can be shown that, for the apparatus used by the student, $g$ is equal to $\frac{2G}{h}$ where $h$ is the thickness of each block used in the experiment.	
	The student obtains a value for $g$ of $9.8~\mathrm{m~s^{-2}}$	
	Calculate h. [1 mark]	I
	h =m	
0 1.5	Explain how you could find out, without drawing another graph, whether the data presented in the graph in <b>Figure 2</b> support the suggestion that $a$ is directly proportional to $n$ . [1 mark]	1
		-
		-
		-   [ <u>-</u>

Identical ring magnets **A** and **B** are arranged on a cylindrical wooden rod. The magnets' magnetic poles are on their largest faces. When placed with like poles in opposition, the magnets repel one another as shown in **Figure 3**.

The plan and sectional views in **Figure 3** identify the dimensions of these magnets. Each magnet has a circular cross-section and the central hole is circular.

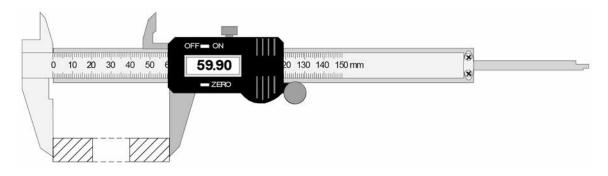

Figure 3

**0** 2. 1 A student uses digital vernier calipers to find the external diameter *D* of magnet **B**, as shown in **Figure 4**.

Figure 4

State precautions the student should take to reduce the effect of systematic and random errors when making this measurement.

[2 marks]

Precaution to reduce effect of systematic error:	
Precaution to reduce effect of random error:	

Question 2 continues on the next page

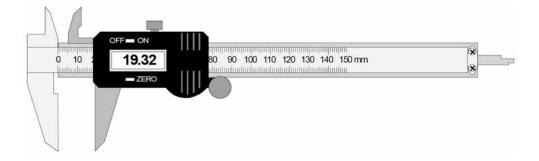

0 2 Figure 5 shows the reading on the calipers as the internal diameter *d* is measured.

Draw the sectional view of magnet  ${\bf B}$  on Figure 5 to indicate how d is measured.

[1 mark]

Figure 5

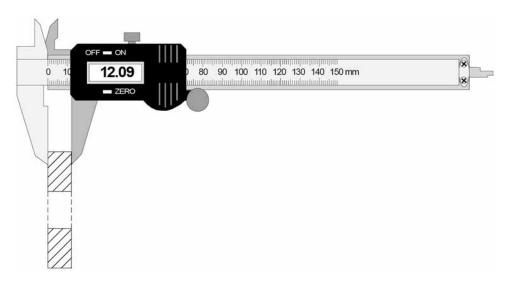

0 2 . 3

**Figure 6** shows the reading on the calipers when the thickness t of magnet  ${\bf B}$  is measured.

Figure 6

The readings that correspond to the dimensions of magnet **B** are shown in **Figures 4**, **5** and **6**.

Calculate the volume of magnet **B**.

[3 marks]

volume =  $m^3$ 

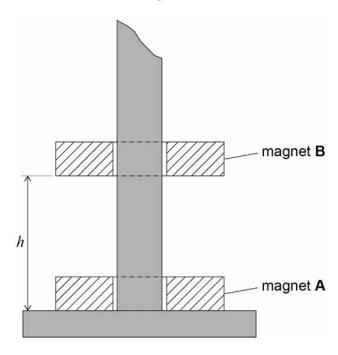

Question 2 continues on the next page

0 2 . 4

The student measures the mass  $m_{\rm B}$  of magnet **B** and then positions the magnet so it is in equilibrium above magnet **A** as shown in **Figure 7**. The student measures the distance h.

Figure 7

The student adds modelling clay to magnet **B** to reduce h by 50% She measures the mass  $m_{\rm C}$  of this clay.

She concludes that the force F exerted on magnet  ${\bf B}$  by magnet  ${\bf A}$  is given by

$$F = \frac{k}{h^3}$$
 where  $k$  is a constant.

Describe an experiment to test the student's conclusion that  $F = \frac{k}{h^3}$ 

Your answer should include:

- the procedure that could be used
- how the data produced could be analysed by a graphical method
  how the value of the constant k could be determined.

[5 marks]

#### **Section B**

Answer all questions in this section.

0 3

A radioactive source emits alpha particles each with  $8.1 \times 10^{-13} \ \mathrm{J}$  of kinetic energy.

3

Show that the velocity of an alpha particle with kinetic energy  $8.1\times 10^{-13}\ J$  is approximately  $2 \times 10^7 \text{ m s}^{-1}$ 

specific charge of an alpha particle =  $4.81 \times 10^7 \ C \ kg^{-1}$ 

[2 marks]

3 . The alpha particles travel through air in straight lines with a range of 3.5 cm

Calculate the average force exerted on an alpha particle as it is stopped by the air.

[2 marks]

average force = N

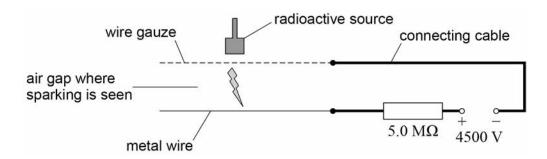

0 3.3	An alpha particle transfers all its kinetic energy to air molecules and produces $5.1\times10^4$ ions per centimetre over its range of $3.5~cm$	
	Calculate the average ionisation energy, in ${ m eV},$ of a molecule of air. [3	marks]
	ionisation energy =	eV
	Question 3 continues on the next page	

0 3 . 4

A spark counter consists of a wire gauze separated from a metal wire by a small air gap. A power supply with an output of 4500~V is connected in series with a  $5.0~M\Omega$  resistor and the spark counter as shown in **Figure 8**. When the radioactive source is moved close to the wire gauze, sparking is seen in the air gap.

Figure 8

Sparks are produced when alpha particles produce ionisation in the air gap. One ionisation event produces a current of  $0.85~\mathrm{mA}$  for a time of  $1.2~\mathrm{ns}$ 

Calculate the number of charge carriers that pass a point in the connecting cable during this ionisation event.

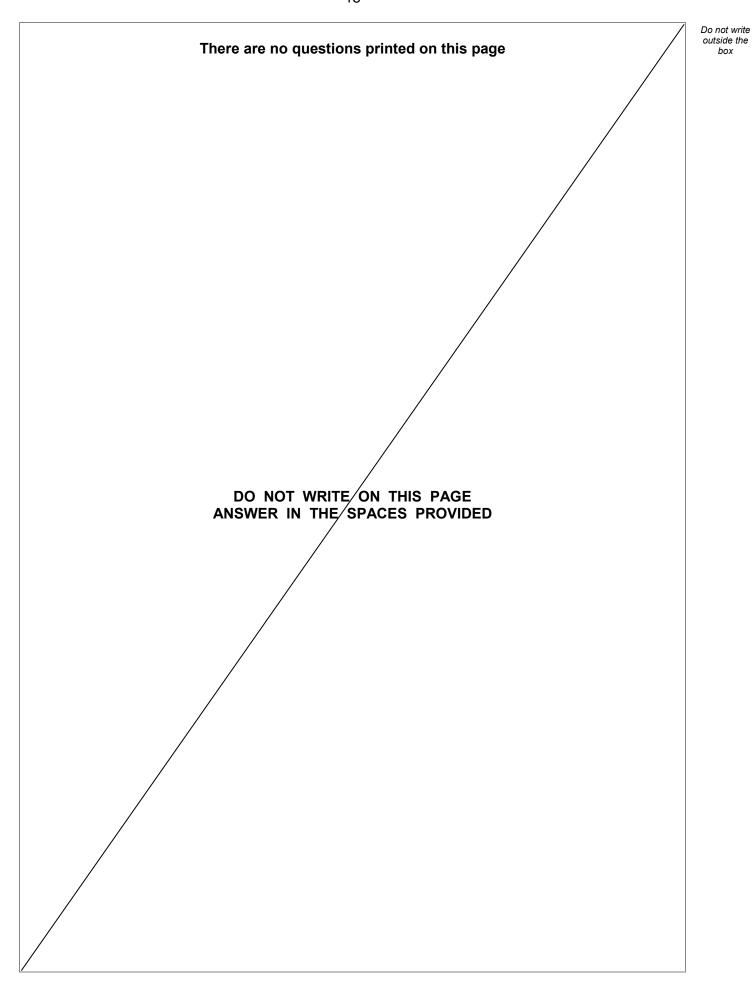

[2 marks]

number of charge carriers =	
-----------------------------	--

0 3.5	The radioactive source was positioned $10~\mathrm{cm}$ above the wire gauze before being moved slowly towards the wire gauze leading to the ionisation event in question <b>03.4</b> . Discuss how the potential difference across the air gap varied as the radioactive source was moved over this distance.
	Assume the power supply has negligible internal resistance.  [3 marks]

Turn over for the next question

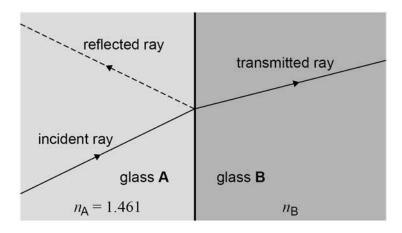

0 4 . 1

**Figure 9** shows an incident ray of light being partially reflected at the boundary between glass **A** and glass **B**. The refractive index  $n_A$  of glass **A** is 1.461

The speed of light in glass  $\bf B$  is 3.252% less than the speed of light in glass  $\bf A$ .

Figure 9

Calculate the refractive index  $n_{\rm B}$  of glass **B**.

Give your answer to an appropriate number of significant figures.

speed of light in a vacuum =  $2.998 \times 10^8 \text{ m s}^{-1}$ 

[3 marks]

 $n_{\mathsf{B}} =$ 

Question 4 continues on the next page

0 4. 2 Figure 10 shows a cross-sectional view of an optical fibre strain gauge.

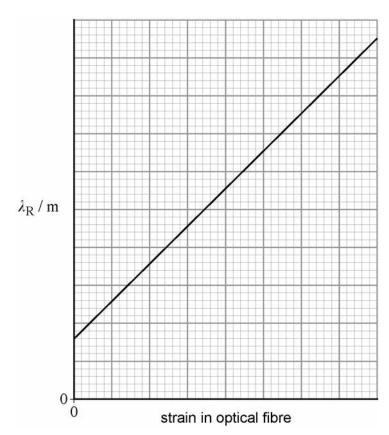

## Figure 10

A maximum intensity of the reflected light is produced due to superposition of the light reflected from each of the regions with increased refractive index in the core. This maximum intensity occurs at a particular wavelength  $\lambda_R$ .

Figure 11 shows the relationship between  $\lambda_{R}$  and the strain in the optical fibre.

Figure 11

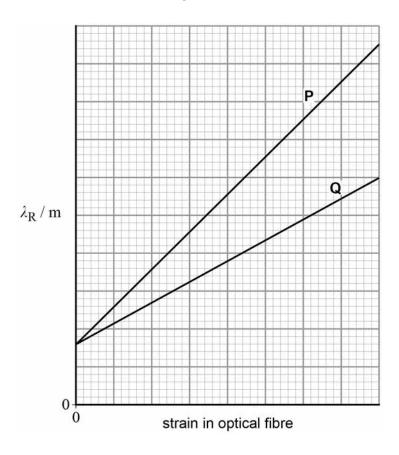

A cable is used to raise and lower a lift. An engineer fixes the optical fibre s gauge to the cable to monitor changes of the strain in the cable.	train
The lift is initially at rest and then accelerates downwards for a short time be reaching a constant velocity.	fore
Discuss how the value of $\lambda_R$ changes.	[3 marks]
Question 4 continues on the next page	

0 4 . 3

**Figure 12** shows the relationship between  $\lambda_R$  and the strain in two optical fibre strain gauges **P** and **Q**. The engineer wishes to measure small accelerations in another lift. She can choose to fix either optical fibre strain gauge **P** or optical fibre strain gauge **Q** to the lift's cable.

Figure 12

Explain which gauge the engineer should select.

[2 marks]

IB M/Jun18/7407/2

8

#### Section C

Each of Questions 05 to 34 is followed by four responses, A, B, C and D.

For each question select the best response.

Only **one** answer per question is allowed.

For each answer completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

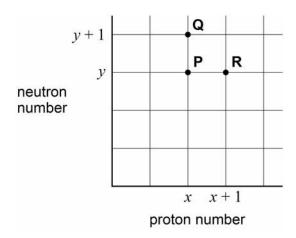

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

You may do your working in the blank space around each question but this will not be marked. Do not use additional sheets for this working.

0 The graph of neutron number against proton number shows three nuclei **P**, **Q** and **R**.

Which row identifies an isotope of P and the nucleon number of this isotope of P?

[1 mark]

	Isotope of P	Nucleon number of isotope of P	
A	Q	<i>y</i> + 1	0
В	Q	x+y+1	0
С	R	x+y+1	0
D	R	<i>x</i> + 1	0

**2 7** Objects **P** and **Q** are initially at rest at time t = 0

The same resultant force F is applied to  ${\bf P}$  and  ${\bf Q}$  for time T.

The mass of  ${\bf P}$  is 10 times greater than the mass of  ${\bf Q}$ .

What is the ratio  $\frac{\text{kinetic energy of } \mathbf{P}}{\text{kinetic energy of } \mathbf{Q}}$ ?

[1 mark]

**A** 0.1

0

**B** 1

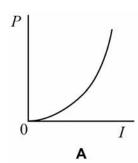

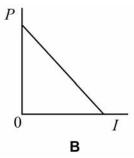

**c** 10

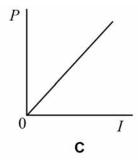

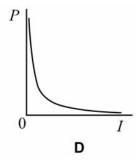

**D** 100

A tangent has been drawn on the curve at point P for a current of  $I_2$ .

What is the resistance of the electrical component when the current in the component is  $I_2$ ?

[1 mark]

 $\mathbf{A} \qquad \frac{V_3 - V_1}{2I_2}$ 

0

 ${\bf B} \qquad \frac{V_{3} - V_{1}}{I_{3} - I_{1}}$ 

0

 $\mathbf{C} \qquad \frac{V_2}{I_2}$ 

0

 $\mathbf{D} \qquad \frac{2V_2}{I_2 - I_1}$ 

0

3 1 A circuit consists of a cell, a thermistor, a fixed resistor and two ammeters.

The cell has a constant electromotive force and negligible internal resistance. Readings from the two ammeters are taken.

Which row describes what happens to the current in each ammeter when the temperature of the thermistor decreases?

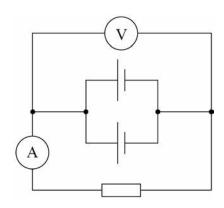

[1 mark]

	Current in ammeter $\mathbf{A}_1$	Current in ammeter $A_2$	
A	Decreases	Unchanged	0
В	Decreases	Increases	0
С	Increases	Decreases	0
D	Increases	Unchanged	0

Turn over for the next question

A circuit consists of two identical cells, a resistor, an ammeter and a voltmeter. The cells each have an emf of 3.0~V and the resistor has a resistance of  $12~\Omega$  The cells have negligible internal resistance.

Which row shows the readings on the voltmeter and ammeter?

[1 mark]

	Voltage / V	Current / A	
Α	3.0	0.25	0
В	3.0	0.50	0
С	6.0	0.25	0
D	6.0	0.50	0

**3 3** Which is equivalent to the ohm?

[1 mark]

**A**  $J C^{-2} s^{-1}$ 

 $\mathbf{B} \qquad \mathbf{J} \; \mathbf{C}^{-2} \, \mathbf{s}$ 

0

C Js

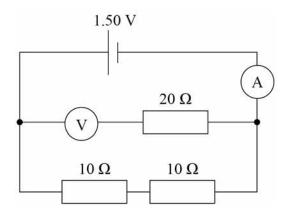

0

 $\mathbf{D}$  J  $\mathbf{s}^{-1}$ 

0

Do not write outside the box

The circuit shows a cell with negligible internal resistance connected in a circuit with three resistors, an ammeter and a voltmeter.

Which row shows the readings on the ammeter and voltmeter?

[1 mark]

	Current / A	Voltage / V	
A	0.075	0.75	0
В	0.075	1.50	0
С	0.150	0.75	0
D	0.150	1.50	0
