Mark scheme

4365
June 2014

Version 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

## Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

M Method marks are awarded for a correct method which could lead to a correct answer.

A

B
Q
M dep

B dep
ft

SC
oe
$[a, b]$
$[a, b)$
25.3 ...

Allow answers which begin 25.3 e.g. 25.3, 25.31, 25.378 .

Use of brackets
It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

## Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

## Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a candidate has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the candidate. In cases where there is no doubt that the answer has come from incorrect working then the candidate should be penalised.

## Questions which ask candidates to show working

Instructions on marking will be given but usually marks are not awarded to candidates who show no working.

## Questions which do not ask candidates to show working

As a general principle, a correct response is awarded full marks.

## Misread or miscopy

Candidates often copy values from a question incorrectly. If the examiner thinks that the candidate has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

## Further work

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

## Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

## Work not replaced

Erased or crossed out work that is still legible should be marked.

## Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

## Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

## Paper 2 Higher Tier

| Q Answer | Mark | Comments |
| :---: | :---: | :---: | :---: |

| 1 | $\frac{30}{20}$ or 1.5 seen or implied <br> or $180+90$ or 270 <br> or $150+75$ or 225 <br> or $200+100$ or 300 <br> or $4+2$ or 6 | M1 | oe |

|  | 1495 or 1505 or 1504.9 seen | B1 |  |
|  | 74.5 or 75.5 or $75.4 \dot{9}$ seen | B1 |  |
|  | $\frac{1495}{75.5}$ or $\frac{1495}{75.4 \dot{9}}$ | M1 | $\frac{\text { their } \min [1450,1500)}{\text { their } \max (75,76]}$ |
|  | 19.8(...) | A1 | Must come from the correct calculation |
|  | 19 | Q1ft | Strand (i) Rounding down their answer ft their 19.8 |
|  | Alternative Method 2 |  |  |
|  | 74.5 or 75.5 or $75.4 \dot{9}^{\text {a }}$ seen | B1 |  |
|  | Any trial correctly evaluated | M1 | eg $18 \times 75.5=1359$ |
|  | $19 \times 75.5=1434.5$ | A1 | Accept $75.4 \dot{9}$ |
|  | $20 \times 75.5=1510$ | A1 | Accept $75.4 \dot{9}$ |
|  | 19 | Q1ft | Strand (i) Lower value |
