# GCE A LEVEL MARKING SCHEME

**SUMMER 2017**

**A LEVEL (NEW)**
**CHEMISTRY - COMPONENT 1**
**A410U10-1**

**INTRODUCTION**

This marking scheme was used by WJEC for the 2017 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

# COMPONENT 1: PHYSICAL AND INORGANIC CHEMISTRY

# MARK SCHEME

# GENERAL INSTRUCTIONS

## Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.

Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

## Extended response questions

A level of response mark scheme is applied. The complete response should be read in order to establish the most appropriate band. Award the higher mark if there is a good match with content and communication criteria. Award the lower mark if either content or communication barely meets the criteria.

## Marking rules

All work should be seen to have been marked.

Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.
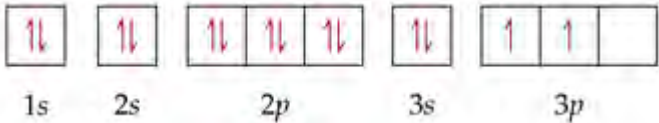

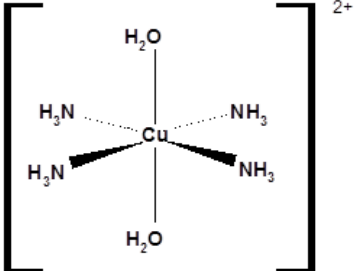

Crossed out responses not replaced should be marked.

## Marking abbreviations

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

cao  =  correct answer only
ecf  =  error carried forward
bod  =  benefit of doubt

Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

# Section A

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 1 | | |  1s 2s 2p 3s 3p | 1 | | | 1 | | |
| 2 | | | $B^+(g) \rightarrow B^{2+}(g) + e^-$ <br> **must** include state (g) | | 1 | | 1 | | |
| 3 | | | **royal** / **dark** blue (1)  do not accept 'blue' <br><br>  (1) | 2 | | | 2 | | 1 |
| 4 | | | $Ba^{2+} + SO_4^{2-} \rightarrow BaSO_4$ <br> ignore state symbols | | 1 | | 1 | | 1 |
| 5 | | | energy of line = $hf$ = 6.63 × 10$^{-34}$ × 3.28 × 10$^{15}$ = 2.17 × 10$^{-18}$ J  (1) <br><br> ionisation energy = 2.17 × 10$^{-18}$ × 6.02 × 10$^{23}$ ÷ 1000 <br>          = 1309 kJ mol$^{-1}$  (1) <br><br> ecf possible | | 2 | | 2 | 2 | |

2

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 6 | | | carbon is more stable as +4 oxidation state (so will be readily oxidised to this oxidation state)  (1) | 1 | | | | 2 | | |
| | | | e.g. $Fe_2O_3 + 3CO \rightarrow 2Fe + 3CO_2$   (1) | | 1 | | | | | |
| 7 | | | temperature 243 K **and** pressure $1.01 \times 10^5$ Pa   (1) | | | | | | | |
| | | | $pV = nRT$ gives $V = nRT \div p$ | | | | | | | |
| | | | $0.267 \times 8.314 \times 243 \div 1.01 \times 10^5 = 5.34 \times 10^{-3}$ m$^3$   (1) | | 2 | | | 2 | 2 | |
| | | | ecf possible | | | | | | | |
| 8 | | | for a reaction to be feasible overall entropy must increase  (1) | 1 | | | | | | |
| | | | when sodium chloride dissolves ions have greater entropy which overcomes the endothermic change  (1) | | | | 1 | 2 | | |
| | | | OR | | | | | | | |
| | | | for a reaction to be feasible Gibbs free energy must be negative  (1) | | | | | | | |
| | | | in this case $\Delta S$ will be large as ions in solution have a greater entropy and counteract the $\Delta H$  (1) | | | | | | | |
| 9 | | | pH in range 2.5-6.5 (must give reason for mark)  (1) | | | | 1 | | | |
| | | | ammonium ion will release H$^+$ ions in solution making solution acidic (can show this by equilibrium)  (1) | | 1 | | | 2 | | |
| | | | **Section A total** | 5 | 8 | 2 | 15 | 4 | 2 | |

## Section B

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 10 | (a) | (i) | 4.39 % (2)<br><br>award (1) if answer given to different number of significant figures | | 2 | | 2 | 2 | |
| | | (ii) | either route acceptable – must include at least **two** advantages of and **one** disadvantage of chosen route; award (1) for each<br><br>**advantages of steam reforming**<br>• produces more $H_2$<br>• higher atom economy / less waste<br>• does not produce $CO_2$<br>• waste product can be recycled in water gas shift reaction<br>**disadvantages**<br>• uses non-renewable resource / fossil fuel as starting material<br>• highly endothermic so will need a lot of energy input<br><br>**advantages of water gas shift reaction**<br>• exothermic so will not need much energy input / energy generated can be used elsewhere<br>• starting material is waste product of another reaction<br>• does not produce CO which is toxic<br>**disadvantages**<br>• produces $CO_2$ which leads to global warming<br>• produces less $H_2$ than reforming<br>• lower atom economy that reforming | | 2 | 1 | 3 | | |
| | (b) | | syngas contains $H_2$ already which is a product of the WGSR (1)<br><br>$H_2$ would shift the equilibrium of the WGSR to the left so less conversion will occur (1) | | 2 | | 2 | | |

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| (c) | (i) | I | catalysts are in a different physical state / phase to the gas reactants | 1 | | | 1 | | |
| | | II | gases can be adsorbed onto catalyst (1)<br><br>this brings the gas reagents together OR the transition metal can oxidise or reduce the gas molecules making them more reactive (1) | 2 | | | 2 | | |
| | (ii) | I | there are the same numbers of gas molecules on both sides of the reaction so pressure does not affect the position of equilibrium | | 1 | | 1 | | |
| | | II | higher pressure: increased rate / less time (1)<br><br>lower pressure: reduced energy costs / reduced equipment costs (to ensure high pressures can operate safely) (1) | 2 | | | 2 | | |
| | (iii) | I | the reaction is exothermic (1)<br><br>higher temperature shifts equilibrium to left so more reactants remain (1) | | 2 | | 2 | | |
| | | II | $K_c = \dfrac{[CO_2][H_2]}{[CO][H_2O]}$ | | 1 | | 1 | | |
| | | III | 1% CO and 1% $H_2O$ in equilibrium mixture (1)<br><br>49% of each product (1)<br><br>$K_c = 49 \times 49 \div (1 \times 1) = 2401$ | | 3 | | 3 | 3 | |
| | | | **Question 10 total** | **5** | **13** | **1** | **19** | **5** | **0** |

5

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 11 | (a) | | | $P_4O_{10} + 6H_2O \rightarrow 4H_3PO_4$ | | 1 | | 1 | | |
| | (b) | | | • Na$_2$O, MgO, Al$_2$O$_3$ have giant ionic structures so has strong electrostatic forces between ions (1) <br><br> • SiO$_2$ has a giant covalent structure / macromolecule so needs to break <u>strong</u> <u>covalent</u> bonds to melt (1) <br><br> • P$_4$O$_{10}$, SO$_2$, Cl$_2$O have covalent molecules and the forces <u>between</u> molecules are <u>weak</u> (1) | 3 | | | 3 | | |
| | (c) | (i) | | aluminium oxide is ionic and aluminium chloride is covalent (1) <br><br> difference in electronegativity between Al and O is greater than that between Al and Cl (1) | 1 | 1 | | 2 | | |
| | | (ii) | | aluminium oxide contains charged ions and aluminium chloride does not (1) <br><br> ions can flow and carry a charge when molten (1) | 2 | | | 2 | | |

6

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| (d) | (i) | | phosphorus has $d$-orbitals in its outer shell / available but nitrogen does not (1) <br><br> this allows phosphorus to expand its octet / have more than 8 electrons in its outer shell (1) | 2 | | | 2 | | |
| | (ii) | | oxidation state in sodium peroxide is –1 (1) <br><br> no change in oxidation states so not redox / oxidation state of oxygen in the $H_2O_2$ is –1 (1) | | 2 | | 2 | | |
| | (iii) | | inert pair effect (1) <br><br> becomes more significant down the group so lead can form +2 but silicon cannot (1) | 2 | | | 2 | | |
| (e) | | | $PCl_3$ has three bonding pairs and one lone pair (1) <br><br> these arrange themselves as far apart as possible to minimise repulsion / lone pairs repel more than bonded pairs (1) <br><br> pyramidal shape or diagram (1) | 1 | 1 <br><br><br> 1 | | 3 | | |
| (f) | | | appropriate diagram / Born-Haber cycle (1) <br><br> $\Delta_fH^\ominus = 150 + (2 \times 121) + 738 + 1451 + (2 \times -349) - 2493$ (1) <br><br> –610 (kJ mol$^{-1}$) (1) | | 1 <br><br> 1 <br><br> 1 | 1 | 3 | 3 | |
| | | | **Question 11 total** | **11** | **8** | **1** | **20** | **3** | **0** |

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 12 | (a) | | | alpha radiation unable to penetrate vial walls / absorbed by solvent | 1 | | | 1 | | |
| | (b) | | | high energy electromagnetic waves | 1 | | | 1 | | |
| | (c) | | | causes mutations / damages DNA or biological molecules | 1 | | | 1 | | |
| | (d) | | | germanium<br>74 **both** needed | | 1 | | 1 | | |
| | (e) | (i) | | number of atoms per minute = $2.1 \times 10^5 \times 60 = 1.26 \times 10^7$ (1)<br><br>number of moles per minute = $1.26 \times 10^7 \div N_A = 2.09 \times 10^{-17}$ (1)<br><br>mass per minute = $2.09 \times 10^{-17} \times 131 = 2.74 \times 10^{-15}$ g (1)<br><br>ecf possible throughout | | 1<br><br>1 | 1 | 3 | 3 | |
| | | (ii) | | caesium-137 (must give reason) (1)<br><br>it has the second highest radioactivity behind chlorine-38 however it has the longest half-life, so there must be a much greater amount of caesium-137 to produce this amount of radioactivity (1) | | | 2 | 2 | 1 | |
| | (f) | | | award (1) for any **two** of following<br>• after two half-lives some of the longest lived isotope is still present<br>• the decay of a radioisotope may produce another radioactive nucleus which may have a longer half-life<br>• there may be other radioactive nuclei not detected so far or not listed with longer half-lives | | | 2 | 2 | | |

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| | (b) | | | **Indicative content** <br> 1. Indicators are weak acids or bases where protonated and deprotonated forms are different colours (can show by equation) <br> 2. Indicator changes colour over a range of pH <br> 3. Different indicators change colour over different pH ranges <br> 4. The colour change range must lie within a vertical range of the titration curve for indicator to be useful <br> 5. Equivalence points for sodium hydroxide / sodium carbonate occur at different pH values <br> 6. Equivalence point for sodium carbonate is acidic, with that of sodium hydroxide in the mixture being neutral OR basic (accept either) <br> 7. To select appropriate indicators, calculate OR find experimentally the pH of the equivalence points and their vertical regions <br> 8. Refer to literature values of pH ranges <br> 9. Name appropriate indicators | 2 | 1 | 3 | 6 | | 6 |

**5-6 marks**
At least **six** relevant points, including **two** of points 3, 4 and 5
*The candidate constructs a relevant, coherent and logically structured account including all key elements of the indicative content. A sustained and substantiated line of reasoning is evident and scientific conventions and vocabulary are used accurately throughout.*

**3-4 marks**
At least **four** relevant points, including at least **two** of points 3, 4 and 5
*The candidate constructs a coherent account including many of the key elements of the indicative content.  Some reasoning is evident in the linking of key points and use of scientific conventions and vocabulary is generally sound.*

**1-2 marks**
At least **three** relevant points
*The candidate attempts to link at least two relevant points from the indicative material.  Coherence is limited by omission and/or inclusion of irrelevant materials.  There is some evidence of appropriate use of scientific conventions and vocabulary.*

**0 marks**
*The candidate does not make any attempt or give an answer worthy of credit.*
