# GCE AS MARKING SCHEME

**SUMMER 2017**

**AS (NEW)**
**CHEMISTRY AS COMPONENT 1**
**B410U10-1**

**INTRODUCTION**

This marking scheme was used by WJEC for the 2017 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

# COMPONENT 1:  THE LANGUAGE OF CHEMISTRY, STRUCTURE OF MATTER AND SIMPLE REACTIONS

## MARK SCHEME

## GENERAL INSTRUCTIONS

### Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.

Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

### Extended response questions

A level of response mark scheme is applied.  The complete response should be read in order to establish the most appropriate band.  Award the higher mark if there is a good match with content and communication criteria.  Award the lower mark if either content or communication barely meets the criteria.

### Marking rules

All work should be seen to have been marked.

Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.

Crossed out responses not replaced should be marked.

### Marking abbreviations

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

cao     =     correct answer only
ecf     =     error carried forward
bod     =     benefit of doubt

Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

## Section A

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 1 | | | $2p^6 3s^2 3p^6 4s^2 3d^6$ / $2p^6 3s^2 3p^6 3d^8 (4s^0)$ | | 1 | | 1 | | |
| 2 | | | 0.75 | | 1 | | 1 | | |
| 3 | (a) | | tendency of an atom joined by a covalent bond to attract the bonded pair of electrons towards itself | 1 | | | 1 | | |
| | (b) | | $\overset{\delta-}{\text{Cl—Cl}}$  $\overset{\delta+}{\text{F—Cl}}$ | | 1 | | 1 | | |
| 4 | (a) | | $K_c = \dfrac{[NO_2]^2}{[N_2O_4]}$ | | 1 | | 1 | | |
| | (b) | | $K_c = \dfrac{(1.6)^2}{0.2} = 12.8$ mol dm$^{-3}$    accept 13 mol dm$^{-3}$  allow ecf from incorrect $K_c$ expression | | 1 | | 1 | 1 | |
| 5 | | | any temperature above 900 °C but comment needed on **trend** | | 1 | | 1 | | |
| 6 | | | +5 | | 1 | | 1 | | |
| 7 | | | any soluble hydroxide **and** any soluble copper(II) salt | | 1 | | 1 | | 1 |
| 8 | | | $3Cu(s) + 8HNO_3(aq) \rightarrow 3Cu(NO_3)_2(aq) + 2NO(g) + 4H_2O(l)$ | | 1 | | 1 | | |
| | | | **Section A total** | 1 | 9 | 0 | 10 | 1 | 1 |

**Section B**
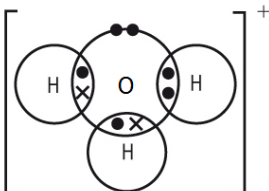

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | **AO1** | **AO2** | **AO3** | **Total** | **Maths** | **Prac** |
| 9 | (a) | | | conductivity due to presence of free / delocalised / sea of electrons  (1) <br><br> more free electrons in Al than Na so Al has greater conductivity / <br> Al has 3 such electrons whilst Na has 1 so more conductivity in Al  (1) | 2 | | | 2 | | |
| | (b) | | | iodine is simple molecular **and** diamond is giant molecular  (1) <br><br> (to change state) iodine molecules have to overcome temporary dipole / Van der Waals forces  (1) <br><br> (to change state) carbon atoms have to break covalent bonds  (1) <br><br> temporary dipole attractions (in iodine) overcome by gentle heating / covalent bonds (in diamond) not broken even at high temperatures / temporary dipole attractions weak & covalent bonds strong  (1) | 4 | | | 4 | | |
| | (c) | | | bonding in both is ionic and melting involves overcoming attraction between positive and negative ions  (1) <br><br> this attraction is greater for magnesium oxide (than it is for sodium chloride  (1) <br><br> (because) ions in magnesium oxide are 2+ and 2– whilst in sodium chloride are 1+ and 1– / (because) ions in magnesium oxide are more highly charged than those in sodium chloride  (1) | 3 | | | 3 | | |

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| | (d) | | | the brown solution (at the end) is bromine in both cases (1) | | 1 | | | | |
| | | | | any **two** of following for (1) each<br>chlorine is a better oxidising agent (than bromine)<br>chlorine takes electron from bromi<u>d</u>e<br>(because) chorine is smaller<br><br>bromine cannot react with chloride (1) | 3 | | | 4 | | 4 |
| | | | | **Question 9 total** | **12** | **1** | **0** | **13** | **0** | **4** |

4

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 10 | (a) | (i) | | energy needed to remove one electron from (every atom) in 1 mol of element in the gaseous state  (1)<br><br>under standard conditions  (1) | 2 | | | 2 | | |
| | | (ii) | I | (for ionisation to take place) an electron must overcome the attraction between it and the nucleus  (1)<br><br>this increases for successive ionisations as each electron is being removed from an increasingly positive species /<br>ratio of protons : electrons goes up  (1) | 2 | | | 2 | | |
| | | | II | **X** is in Group II – some attempt at explanation required  (1)<br><br>big jump after removal of two electrons / new shell broken into after removal of two electrons (1) | | | 2 | 2 | | |

| Question | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| (b) | (i) | | **Indicative content**<br>• for ionisation energy determination transitions to n = 1 must be used / Lyman series must be used (**statement 1**)<br>• lines in visible spectrum comes from transitions involving n = 2 / Balmer series<br>• electrical energy excites electrons<br>• electrons fall back and give off energy<br>• lines formed since only some energies are allowed<br>• lines are closer together at higher energies<br>• since energy levels get closer<br>• convergence limit is when electron removed / ionisation takes place<br>• use $E = hf$ | 5 | | 1 | 6 | | |

**5-6 marks**
Recognition that Lyman series required, clear understanding of electron transition and convergence of lines/energy levels
*The candidate constructs a relevant, coherent and logically structured account including all key elements of the indicative content. A sustained and substantiated line of reasoning is evident and scientific conventions and vocabulary are used accurately throughout.*

**3-4 marks**
Basic understanding of electron transition and convergence of lines/energy levels
*The candidate constructs a coherent account including many of the key elements of the indicative content. Some reasoning is evident in the linking of key points and use of scientific conventions and vocabulary is generally sound.*

**1-2 marks**
Some knowledge of electron transition between energy levels
*The candidate attempts to link at least two relevant points from the indicative material. Coherence is limited by omission and/or inclusion of irrelevant materials. There is some evidence of appropriate use of scientific conventions and vocabulary.*

**0 marks**
*The candidate does not make any attempt or give an answer worthy of credit.*

| Question | | | | Marking details | Marks available | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | AO1 | AO2 | AO3 | Total | Maths | Prac |
| | | (ii) | | $\Delta E = 6.63 \times 10^{-34} \times 3.28 \times 10^{15}$ (= $2.175 \times 10^{-18}$ J)   (1) $6.63 \times 10^{-34} \times 3.28 \times 10^{15} \times 6.02 \times 10^{23}$   (1) 1310   (1)     answer **must** be given to 3 sig figs | | 3 | | 3 | 3 | |
| | | | | **Question 10 total** | 9 | 3 | 3 | 15 | 3 | 0 |
