# **GCE A LEVEL MARKING SCHEME**

---

**SUMMER 2023**

**A LEVEL  
CHEMISTRY – COMPONENT 2  
A410U20-1**

## **INTRODUCTION**

This marking scheme was used by WJEC for the 2023 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

**GCE A LEVEL CHEMISTRY**  
**COMPONENT 2: ORGANIC CHEMISTRY AND ANALYSIS**  
**SUMMER 2023 MARK SCHEME**

**GENERAL INSTRUCTIONS**

Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.

Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

Extended response questions

A level of response mark scheme is applied. The complete response should be read in order to establish the most appropriate band. Award the higher mark if there is a good match with content and communication criteria. Award the lower mark if either content or communication barely meets the criteria.

Marking rules

All work should be seen to have been marked.

Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.

Crossed out responses not replaced should be marked.

### Marking abbreviations

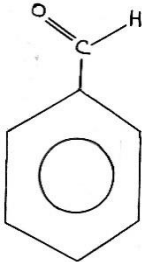

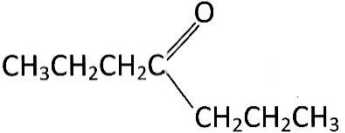

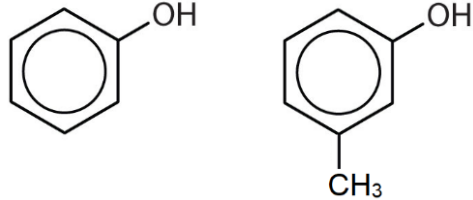

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

cao = correct answer only  
ecf = error carried forward  
bod = benefit of doubt

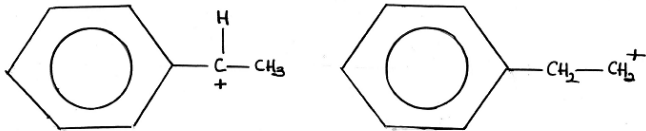

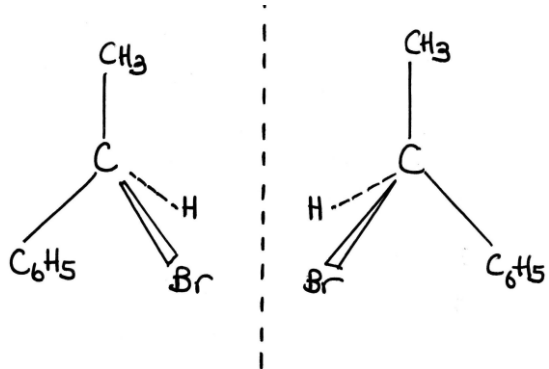

Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

## Section A

Question			Marking details	Marks available					
				AO1	AO2	AO3	Total	Maths	Prac
1			<p>bond fission where each atom in the bond receives an electron from the bond (1)</p> $  \begin{array}{c} \text{H} & \text{H} \\   &   \\ \text{H}-\text{C}-\text{C}-\text{H} \\   &   \\ \text{H} & \text{H} \end{array} \longrightarrow 2 \begin{array}{c} \text{H} \\   \\ \text{H}-\text{C}\cdot \\   \\ \text{H} \end{array} \quad (1)  $ <p>accept</p> $\text{CH}_3\text{CH}_3 \rightarrow \text{CH}_3\text{CH}_2\cdot + \text{H}\cdot$	2			2		
2			<p>award (1) each for following isomers</p> $  \begin{array}{c} \text{H} & \text{H} \\   &   \\ \text{H}-\text{C}-\text{C}=\text{C}-\text{CH}_3 \\   &   \\ \text{H} & \text{H} \end{array} \quad \begin{array}{c} \text{H} & \text{H} & \text{H} & \text{H} \\   &   &   & / \\ \text{H}-\text{C}-\text{C}-\text{C}=\text{C} \\   &   & & \backslash \\ \text{H} & \text{H} & & \text{H} \end{array}  $		2		2		
3			<p>award (1) for correct formulae of both products</p> $\text{CH}_3\text{CH}_2\text{CH}_2\text{COOCH}_2\text{CH}_3 + \text{H}_2\text{O}$ <p>ethyl butanoate (1)</p>		2		2		

Question			Marking details	Marks available

11	(a)		<p><b>Indicative content</b></p> <ul style="list-style-type: none"> <li>with sodium hydrogencarbonate methyl methanoate <math>\Rightarrow</math> no obvious reaction ethanoic acid <math>\Rightarrow</math> effervescence / <math>\text{CO}_2</math> evolved <math>\Rightarrow</math> shows that it is acidic</li> <li>with universal indicator methyl methanoate <math>\Rightarrow</math> turns green <math>\Rightarrow</math> pH7 / neutral / no <math>\text{H}^+</math> or <math>\text{OH}^-</math> ions present ethanoic acid <math>\Rightarrow</math> turns orange <math>\Rightarrow</math> pH&lt;7 / weakly acidic / <math>\text{H}^+</math> ions present</li> <li>boiling temperature methyl methanoate – dipole-dipole interactions, lower boiling temperature ethanoic acid – hydrogen bonding, higher boiling temperature</li> <li><math>^1\text{H}</math> NMR methyl methanoate single hydrogen at 9.8 (accept values in range 8-10) methyl hydrogens at 3.3-4.3 peak area ratio 3:1 with no splitting</li> </ul> <p>ethanoic acid single hydrogen at 11.0 (accept values ~11) methyl hydrogens at 2.0-2.5 with no splitting</p>	2	2	2	6		4

Question			Marking details	Marks available					
				AO1	AO2	AO3	Total	Maths	Prac
			<p><b>5-6 marks</b> All essential points described in a reasoned and logical manner <i>The candidate constructs an articulate, integrated account, which shows sequential reasoning. The answer fully addresses the question with no irrelevant inclusions or significant omissions. The candidate uses scientific conventions and vocabulary appropriately and accurately.</i></p> <p><b>3-4 marks</b> Basic details of most points described <i>The candidate constructs an account correctly linking some relevant points showing some reasoning. The answer addresses the question with some omissions. The candidate usually uses scientific conventions and vocabulary appropriately and accurately.</i></p> <p><b>1-2 marks</b> Attempt at basic description of some points <i>The candidate makes some relevant points showing limited reasoning. The answer addresses the question with significant omissions. The candidate makes limited use of scientific conventions and vocabulary.</i></p> <p><b>0 marks</b> <i>The candidate does not make any attempt or give a relevant answer worthy of credit.</i></p>						
	(b)	(i)	<p>award (1) for temperature in the range 140-160°C</p> <p>as the chain length increases by each CH<sub>2</sub> the boiling temperature increased by about 30°C (as van der Waals forces increase) (1)</p>	1	1		2		

Question			Marking details	Marks available					
				AO1	AO2	AO3	Total	Maths	Prac
		(ii)	<p>intermolecular forces / dipole-dipole interactions are weaker / 'packing' is less strong (due to less surface area contact) (1)</p> <p>less energy is required to separate the molecules into the gas phase (1)</p>		2		2		
	(c)		<p><math>100 \text{ m}^3 = 100 \times 10^3 \text{ dm}^3 = 10^5 \text{ dm}^3</math></p> <p>in <math>10^6 \text{ dm}^3</math> there needs to be <math>5 \text{ dm}^3</math> of tetrahydrothiophene  in <math>10^5 \text{ dm}^3</math> there needs to be <math>0.50 \text{ dm}^3</math> of tetrahydrothiophene (1)</p> <p>1 mol of tetrahydrothiophene at 298 K and 1 atm occupies <math>24.5 \text{ dm}^3</math>  <math>0.50 \text{ dm}^3 = \frac{0.50}{24.5} = 0.0204 \text{ mol}</math> (1)</p> <p>mass of liquid = <math>88 \times 0.0204 = 1.8 \text{ g}</math></p> <p>as density of liquid is <math>1.0 \text{ g cm}^{-3}</math> this is <math>1.8 \text{ cm}^3</math> of the liquid (1)</p>			3	3	2	
	(d)		$\text{C}_4\text{H}_8\text{S} + 7\text{O}_2 \rightarrow 4\text{CO}_2 + 4\text{H}_2\text{O} + \text{SO}_2$		1		1		
	(e)		<p>moles of 2,4,6-tribromophenol = <math>\frac{4.58}{331} = 0.0138 \text{ mol}</math></p> <p>mass of phenol = <math>0.0138 \times 94 = 1.30 \text{ g}</math> (1)</p> <p>concentration = <math>\frac{1.30}{\frac{150}{1000}} = 8.67 \text{ g dm}^{-3}</math> (1)</p>		2		2	1
