

GCE A LEVEL MARKING SCHEME

AUTUMN 2020

**A LEVEL
CHEMISTRY – COMPONENT 3
A410U30-1**

INTRODUCTION

This marking scheme was used by WJEC for the 2020 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

GCE A LEVEL CHEMISTRY COMPONENT 3

CHEMISTRY IN PRACTICE

AUTUMN 2020 MARK SCHEME

GENERAL INSTRUCTIONS

Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.

Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

Extended response questions

A level of response mark scheme is applied. The complete response should be read in order to establish the most appropriate band. Award the higher mark if there is a good match with content and communication criteria. Award the lower mark if either content or communication barely meets the criteria.

Marking rules

All work should be seen to have been marked.

Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.

Crossed out responses not replaced should be marked.

Marking abbreviations

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

cao = correct answer only
ecf = error carried forward
bod = benefit of doubt

Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

Question			Marking details	Marks available					
				AO1	AO2	AO3	Total	Maths	Prac
1	(a)		D methylpropan-2-ol (1) H pentanenitrile (1)	2			2		
	(b)	(i)	award (1) for correctly drawn structures of both optical isomers of $\text{CH}_3\text{CH}(\text{CN})\text{CH}_2\text{CH}_3$ 		1		1		
		(ii)	they rotate the plane of plane polarised light in opposite directions	1			1		
		(iii)	award (1) for reagent and (1) for product e.g. (reduction with) LiAlH_4 (1) to form $\text{CH}_3\text{CH}(\text{CH}_2\text{NH}_2)\text{CH}_2\text{CH}_3$ (1) (hydrolysis with) HCl (1) to form $\text{CH}_3\text{CH}(\text{COOH})\text{CH}_2\text{CH}_3$ (1) (hydrolysis with) NaOH (1) to form $\text{CH}_3\text{CH}(\text{COONa})\text{CH}_2\text{CH}_3$ (1)		2		2		2

Question		Marking details				Marks available					
						AO1	AO2	AO3	Total	Maths	Prac
(c)		Compounds	Reagent(s) and condition(s)	Observation(s)	Organic compound(s) formed	4	4	8			
	CH ₃ CH ₂ CH ₂ CH ₂ OH and CH ₃ CH ₂ CH ₂ CH ₂ Br	acidified dichromate(VI) / heat (reflux)	orange to green solution	CH ₃ CH ₂ CH ₂ CHO or CH ₃ CH ₂ CH ₂ COOH							
	CH ₃ CH ₂ CH ₂ CHO and (CH ₃) ₃ COH	Tollens' reagent (alkaline solution of ammoniacal silver nitrate) warm gently in hot water bath	silver mirror	CH ₃ CH ₂ CH ₂ COOH							
	CH ₃ CH ₂ CH ₂ COOH and CH ₃ CH ₂ CH(OH)CH ₃	I ₂ / NaOH(aq) or KI / NaClO(aq)	yellow solid	CHI ₃ and CH ₃ CH ₂ COONa							
	CH ₃ CH ₂ CH ₂ CH ₂ NH ₂ and CH ₃ CH ₂ CH ₂ CH ₂ CN	nitric(III) acid (HNO ₂) room temperature	bubbles of gas	CH ₃ CH ₂ CH ₂ CH ₂ OH							
	award (1) for each reagent with conditions, for each observation and for each compound formed

		(ii)	<p>Indicative content</p> <ol style="list-style-type: none"> Find time taken for methyl orange indicator to be bleached at a number of different temperatures Initial reactant concentrations remain unchanged across all experiments Calculate the rate at each temperature Calculate the rate constant, k, at each temperature Plot $\ln k$ against $\frac{1}{T}$ where T is temperature in Kelvin Arrhenius equation $k = Ae^{\frac{-E_a}{RT}}$ Arrhenius equation rearranged $\Rightarrow \ln k = \ln A - \frac{E_a}{RT}$ Gradient of straight line $\Rightarrow m = -\frac{E_a}{R}$ Calculate E_a 		3	3	6	3	3

Question				Marking details	Marks available						
					AO1	AO2	AO3	Total	Maths	Prac	
				<p>5-6 marks Clear outline of how data is processed; good understanding of relationship between graph and Arrhenius equation <i>The candidate constructs a relevant, coherent and logically structured account including all key elements of the indicative content. A sustained and substantiated line of reasoning is evident and scientific conventions and vocabulary is used accurately throughout.</i></p> <p>3-4 marks Good knowledge of practical steps; basic understanding of data processing; some idea of link between graph and Arrhenius equation <i>The candidate constructs a coherent account including many of the key elements of the indicative content. Some reasoning is evident in the linking of key points and use of scientific conventions and vocabulary is generally sound.</i></p> <p>1-2 marks Some knowledge of practical steps; some idea of data processing <i>The candidate attempts to link at least two relevant points from the indicative material. Coherence is limited by omission and/or inclusion of irrelevant materials. There is some evidence of appropriate use of scientific conventions and vocabulary.</i></p> <p>0 marks <i>The candidate does not make any attempt or give an answer worthy of credit.</i></p>
